DOCTORATE IN PHILOSOPHY
CIVIL ENGINEERING

Summary
• Degree offered: Doctorate in Philosophy (PhD)
• Registration status option: Full-time
• Language of instruction: English
• Program option (expected duration of the program):
  • within four years
• Academic units: Faculty of Engineering (http://engineering.uottawa.ca/), Department of Civil Engineering (http://engineering.uottawa.ca/civil/), Ottawa-Carleton Institute of Civil Engineering (http://www.ocice.ca/)

Program Description
Ottawa-Carleton Joint Program
Established in 1984, the Ottawa-Carleton Institute of Civil Engineering (OCICE) combines the research strengths and resources of the Departments of Civil and Environmental Engineering at Carleton University with that of the Department of Civil Engineering at the University of Ottawa.

The Institute offers graduate programs leading to the degrees of Master of Applied Science (MASc), Master of Engineering (M.Eng.) and Doctor of Philosophy (PhD) in Civil Engineering.

Research facilities are shared between the two campuses. Students have access to the professors, courses and facilities at both universities, however, they must enroll at the "home university" of the thesis supervisor.

Main Areas of Research
• Construction engineering and management
• Environmental engineering
• Geotechnical engineering
• Structural engineering
• Sustainable Materials and Construction
• Water resources engineering

Other Programs Offered Within the Same Discipline or in a Related Area
• Master of Applied Science in Civil Engineering (MASc)
• Master of Applied Science in Civil Engineering Specialization in Science, Society and Policy (MASc)
• Master of Applied Science in Environmental Engineering (MASc)
• Master of Engineering in Civil Engineering (MEng)
• Master of Engineering in Environmental Engineering (MEng)
• Master of Applied Science in Environmental Specialization in Environmental Sustainability (MASc)
• Doctorate in Philosophy in Environmental Engineering (PhD)

Fees and Funding
• Program fees

The estimated amount for university fees (https://www.uottawa.ca/university-fees/) associated with this program are available under the section Finance your studies (http://www.uottawa.ca/graduate-studies/programs-admission/finance-studies/).

International students enrolled in a French-language program of study may be eligible for a differential tuition fee exemption (https://www.uottawa.ca/university-fees/differential-tuition-fee-exemption/).

• To learn about possibilities for financing your graduate studies, consult the Awards and financial support (https://www.uottawa.ca/graduate-studies/students/awards/) section.

Notes
• Research activities can be conducted in either English or French or both depending on the language used by the professor and the members of the research group.
• The program is governed by the regulations and procedures for Joint Graduate Programs and the general regulations (http://www.uottawa.ca/graduate-studies/students/general-regulations/) in effect for graduate studies at each of the two universities.
• In accordance with the University of Ottawa regulation, students have the right to complete their assignments, examinations, research papers, and theses in French or in English.

Admission Requirements
For the most accurate and up to date information on application deadlines, language tests and other admission requirements, please visit the specific requirements (https://www.uottawa.ca/graduate-studies/programs-admission/apply/specific-requirements/) webpage.

To be eligible, candidates must:
• Hold a master's degree with thesis in civil engineering, or in the sub-disciplines normally considered to be part of civil engineering with a minimum average of B+.

Note: International candidates must check the admission equivalencies (https://www.uottawa.ca/graduate-studies/international/study-uottawa/admission-equivalencies/) for the diploma they received in their country of origin.
• Demonstrate strong research performance.
• Identify at least one professor who is willing to supervise your research and thesis.
  • We recommend that you contact potential thesis supervisors as soon as possible.
  • To register, you need to have been accepted by a thesis supervisor.
  • The supervisor’s name is required at the time of application.
  • The choice of research supervisor will determine the primary campus location of the student. It will also determine which university awards the degree.

Language Requirements
Applicants must be able to understand and fluently speak the language of instruction (French or English) in the program to which they are applying. Proof of linguistic proficiency may be required.

Applicants whose first language is neither French nor English must provide proof of proficiency in the language of instruction.

Note: Candidates are responsible for any fees associated with the language tests.

Notes
• The admission requirements listed above are minimum requirements and do not guarantee admission to the program.
• Admissions are governed by the general regulations (http://www.uottawa.ca/graduate-studies/students/general-regulations/) in effect for graduate studies and by the general regulations of the Ottawa-Carleton Institute of Civil Engineering (OCICE).

Fast-Track from Master’s to PhD
Students enrolled in the master’s program in Civil Engineering at the University of Ottawa may be eligible to fast-track directly into the doctoral program without writing a master’s thesis, provided the following conditions are met:

• Completion of 5 graduate courses with a minimum average of A- (80%);
• Satisfactory progress in the research program;
• Written recommendation by the supervisor and by the graduate studies committee.
• Approval by the graduate studies committee.

Note: The transfer must take place within sixteen months of initial enrollment in the master’s. The minimal admission average requirements for the doctoral program must also be met. Following the transfer, all of the requirements of the doctoral program must be met.

Program Requirements
Doctorate
Students must meet the following requirements:

Compulsory Courses:

12 course units in civil engineering (CVG) or environmental engineering (EVG) at the graduate level ¹

Seminar:

CVG 8366 Doctoral Seminar in Civil Engineering

Comprehensive Examination:

CVG 9998 Comprehensive Examination (Phd)

Thesis:

THD 9999 Doctoral Thesis ²

Note(s)
1 In the case of transfer from the MASc to the PhD, students must complete 27 units master’s (15 units) and PhD (12 units) combined.
2 Students are responsible for ensuring they have met all of the thesis requirements (http://www.uottawa.ca/graduate-studies/students/theses/). The thesis must be based on original research carried out under the direct supervision of a research faculty member in the Department.

Minimum Requirements
The passing grade in all courses is B.

Students who fail 6 units, the thesis proposal, the comprehensive exam, the thesis, or whose progress is deemed unsatisfactory must withdraw from the program.

Research
Research Fields & Facilities
Located in the heart of Canada’s capital, a few steps away from Parliament Hill, the University of Ottawa is among Canada’s top 10 research universities.

uOttawa focuses research strengths and efforts in four Strategic Areas of Development in Research (SADRs):

• Canada and the World
• Health
• e-Society
• Molecular and Environmental Sciences

With cutting-edge research, our graduate students, researchers and educators strongly influence national and international priorities.

Research at the Faculty of Engineering
Areas of research:

• Chemical and Biological Engineering
• Civil Engineering
• Electrical Engineering and Computer Science
• Environmental Engineering
• Mechanical Engineering

For more information, refer to the list of faculty members and their research fields on Uniweb.

IMPORTANT: Candidates and students looking for professors to supervise their thesis or research project can also consult the website of the faculty or department (https://www.uottawa.ca/graduate-studies/students/academic-unit-contact-information/) of their program of choice. Uniweb does not list all professors authorized to supervise research projects at the University of Ottawa.

Courses

Not all of the following courses are necessarily given each year.

**CVG 5100 Deep Foundations (3 units)**
Deep foundation types in North American practice (driven or bored piles, and slurry trench techniques); axial and lateral capacity and settlement analysis for single piles and pile groups; field inspection methods; pile dynamics; performance and analysis of static test loading. This course is equivalent to CIVJ 5000 at Carleton University.

Course Component: Lecture

**CVG 5106 Site Improvements (3 units)**
Description, design procedures and usage of current site improvement techniques, including preloading, earth reinforcement, dynamic consolidation, vibrocompaction, blasting densification, lime treatment, drains, and geotechnical fabrics. This course is equivalent to CIVJ 5006 at Carleton University.

Course Component: Lecture

**CVG 5111 Hydraulic Structures (3 units)**
Classification and function of hydraulic structures; analysis and design of hydraulic works for gravity dams, arch dams, earth fill and rock-fill dams; ancillary works including water intakes, various types of spillways, control structures, energy dissipation and stilling basin, bottom outlets. Advanced topic in channel design including transitions; hydraulic transients, free surface and free surge analysis; water towers and compensation basins; penstocks. Navigation locks. Coastal protection works and maritime structures. This course is equivalent to CIVJ 5501 at Carleton University.

Course Component: Lecture

**CVG 5112 Computational Hydrodynamics (3 units)**
Finite volume methods for advection, diffusion and shallow water equations using structured and unstructured grids, finite volume methods for incompressible Navier-Stokes equations (SIMPLE, SIMPLEC, PISO), error analysis: numerical diffusion and dispersion, truncation errors and Fourier analysis, introduction to turbulence modeling, introduction to methods for tracking free surfaces and moving beds, introduction to other methods in hydrodynamics: finite element, finite difference, Chebyshev and Fourier spectra, semi Lagrangian and vortex methods in hydrodynamics. This course is equivalent to CIVJ 5502 at Carleton University.

Course Component: Lecture

**CVG 5120 Water Resources Systems (3 units)**
Conservation of water resources. Multi-purpose project planning: study of domestic and foreign water development projects. Techniques for simulation, optimization, linear and dynamic programming. This course is equivalent to CIVJ 5506 at Carleton University.

Course Component: Lecture

**CVG 5123 Advanced Topics in Hydrology (3 units)**
Selected topics of current interest in surface and groundwater hydrology. This course is equivalent to CIVJ 5509 at Carleton University.

Course Component: Lecture

**CVG 5124 Coastal Engineering (3 units)**
Key concepts in coastal engineering: (1) wave mechanics and coastal hydrodynamics, (2) sediment transport and coastal morphodynamics and (3) coastal structures and coastal zone management. Wave mechanics and coastal hydrodynamics to include small-amplitude wave theory, finite amplitude wave theories (Stokes, Cnoidal and solitary wave), wave generation, wave transformations, development and prediction, hydrodynamics of coastal circulation. Sediment transport and coastal morphodynamics to include: wave and current-induced sediment transport, coastal sediment processes, longshore and cross-shore beach morphologic transformations, etc. Coastal structures and coastal zone management to include: beach erosion control, coastal structures (dikes, breakwaters, groins, seawalls), beach nourishment, coastal pollution and control, nearshore area development. This course is equivalent to CIVJ 5605 at Carleton University.

Course Component: Lecture

**CVG 5125 Statistical Methods Hydrology (3 units)**
Concepts of probability and random variables applied to hydrology. Statistical distributions, their approximation and analysis. Statistical inference, including tests of significance and estimation theory. Linear and multivariate correlation and regression techniques. Data generation and simulation techniques for design of water-resource systems. Introduction to hydrologic and meteorologic time series. This course is equivalent to CIVJ 5601 at Carleton University.

Course Component: Lecture

**CVG 5142 Advanced Structural Dynamics (3 units)**
Dynamic behaviour of civil engineering structures under excitations due to earthquakes, wind, waves, etc. Advanced methods in dynamic analysis of structures. Prediction of structural response. Design considerations. This course is equivalent to CIVJ 5201 at Carleton University.

Course Component: Lecture

**CVG 5143 Advanced Structural Steel Design (3 units)**
Analysis of thin-walled beams; design applications including members under combined forces; analysis and design of beams under non-uniform torsion; limit state design methodology; comparative study of modern structural steel standards; formulating elastic and plastic interaction relations for members under combined forces; designing columns, beams, and beam columns for cross-sectional strengths; local buckling and global stability considerations; design of bracing systems. This course is equivalent to CIVJ 5202 at Carleton University.

Course Component: Lecture

**CVG 5144 Advanced Structural Steel Design (3 units)**
Stress-strain relations. Theories of plane stress and plane strain. Use of stress functions, energy and variational methods in the analysis of elastostatic problems. This course is equivalent to CIVJ 5203 at Carleton University.

Course Component: Lecture

CVG 5146 Numerical Methods of Structural Analysis (3 units)
Numerical procedures and methods of successive approximations for the solution of structural problems. Virtual work, principles of minimum potential and complementary energy. Applications of variation and finite difference techniques to the solutions of complicated problems in beams, plates and shells. This course is equivalent to CIVJ 5302 at Carleton University.
Course Component: Lecture

CVG 5147 Theory of Plates and Shells (3 units)
Stress distribution in flat plates of various shapes. Large deflection theory, numerical methods. Membrane theory, bending theory for cylindrical shells, bending theory for shells of revolution. This course is equivalent to CIVJ 5204 at Carleton University.
Course Component: Lecture

CVG 5148 Prestressed Concrete Design (3 units)
Materials, methods of prestressing, prestress losses, and anchorage zone stresses. Elastic analysis, design and behaviour of simple and continuous prestressed concrete beams, frames and slabs. Discussion of current design specifications. Ultimate strength of members. This course is equivalent to CIVJ 5305 at Carleton University.
Course Component: Lecture

CVG 5149 Structural Stability (3 units)
Elastic, inelastic, and torsional buckling of columns, beam column behaviour, plane and space frame stability, lateral torsional buckling of beams, global buckling of truss systems, plate and shell buckling, local buckling in tubulars, use of energy methods, matrix analysis, and finite element analysis in modeling stability problems, bracing requirements, standard provisions and design considerations in structural stability. This course is equivalent to CIVJ 5306 at Carleton University.
Course Component: Lecture

CVG 5150 Advanced Concrete Technology (3 units)
Cement: types, hydration, physical properties; aggregate: classification, grading, properties; fresh concrete: influence of basis constituents and admixtures on workability, mixing, placing; strength of hardened concrete; nature of strength, influence of constituents, curing methods; durability; chemical attack, frost action, thermal effects; elasticity, shrinkage and creep; special concrete; lightweight, high density; mix design; approaches, weigh batching, volume proportioning, special mixes; field and laboratory test methods. This course is equivalent to CIVJ 5304 at Carleton University.
Course Component: Lecture

CVG 5151 Advanced Timber Design (3 units)
Characteristic values for timber and engineered wood products, modification factors used in design; design of members subjected to combined bending axial loading; design for bi-axial bending; design of curved glued laminated beams, Timber-Concrete Composite (TCC) floor systems; lateral design (wind and seismic loading) for light-frame, CLT and hybrid structures; advanced connection design including design of proprietary connections.
Course Component: Lecture

CVG 5153 Wind Engineering (3 units)
The structure and climate of wind; wind loading on structures; wind induced dynamic problems of structures; environmental aerodynamics; dispersion of pollutant; analysis of wind data; experimental investigations. This course is equivalent to CIVJ 5209 at Carleton University.
Course Component: Lecture

CVG 5154 Random Vibration (3 units)
Descriptions of random data. Frequency domain analysis and time domain analysis. Stochastic response of structures; wind and earthquake excitation, etc. Data analysis techniques. Prediction for design purposes. Simulation of random processes. Special topics. This course is equivalent to CIVJ 5308 at Carleton University.
Course Component: Lecture

CVG 5155 Earthquake Engineering (3 units)
Course Component: Lecture

CVG 5156 Finite Element Methods (3 units)
Review of basic matrix methods. Structural idealizations. The displacement versus the force method. Stiffness properties of structural elements. Finite elements in beam bending, plane stress and plate bending. This course is equivalent to CIVJ 5301 at Carleton University.
Course Component: Lecture

CVG 5157 Finite Element Methods (3 units)
Application of finite elements to folded plates, shells and continua. Convergence criteria and order of accuracy. Inertial and initial stress properties. Dynamic and buckling problems. Non-linear deflections and plasticity. This course is equivalent to CIVJ 5303 at Carleton University.
Course Component: Lecture

CVG 5158 Elements of Bridge Engineering (3 units)
Introduction; limit state design; highway bridge design loads; analysis and design of concrete decks; impact and dynamics; load capacity rating of existing bridges and construction in cold climate. This course is equivalent to CIVJ 5307 at Carleton University.
Course Component: Lecture

CVG 5159 Long Span Structures (3 units)
Course Component: Lecture

CVG 5160 Sediment Transport (3 units)
An introduction to particle transport, with special emphasis on river engineering applications, including natural channel design. Sediment properties, initiation of motion, bed load, suspended load, fluvial dunes, alluvial channels, bank erosion and protection, natural channel design. Special topics include contaminated sediments, local scour, morphodynamic modelling, fluvial habitat. This course is equivalent to CIVJ 5503 at Carleton University.
Course Component: Lecture
CVG 5161 Mechanics of Unsaturated Soils (3 units)
Introduction to unsaturated soils, phases of an unsaturated soil, phase properties and relations, stress state variables for saturated and unsaturated soils. Measurement of soil suction: theory of soil suction, capillarity, measurements of total suction and matric suction. Flow Laws: flow of water and measurement of permeability, shear strength theory: history, failure envelope for unsaturated soils, triaxial and direct shear tests, typical results, simple testing procedures, volume change behavior including expansive soils behavior. Soil-water characteristic curve: its behavior and use in predicting the engineering properties of unsaturated soils, practical applications of the principles of unsaturated soils. This course is equivalent to CIVJ 5504 at Carleton University.
Course Component: Lecture

CVG 5162 River Hydraulics (3 units)
Advanced concepts of river hydraulics, with an emphasis on field measurement techniques and application of numerical models. Navier-Stokes equations, turbulence, flow resistance, numerical modelling of simplified momentum and continuity equations, field-based measurement and statistical analysis of velocity fields. Special topics include contaminant transport, morphodynamic modelling. This course is equivalent to CIVJ 5505 at Carleton University.
Course Component: Lecture

CVG 5175 Numerical Methods for Geotechnical Engineers (3 units)
Non-linear analysis of stresses and deformations using the effective stress concept; analysis of consolidation using the excess pore water pressure concept; flow through porous media; finite element, discrete element and finite difference methods; applications to foundations of structures, retaining walls, dams, tunnels, pipelines, human-made and natural slopes in rock and soil. This course is equivalent to CIVJ 5105 at Carleton University.
Course Component: Lecture

CVG 5176 Soil Mechanics and Foundations (3 units)
Introduction to soil mechanics and foundation engineering, covering the behavior of soil and rock in relation to engineering structures. Topics include: soil behavior, soil classification, stress-strain relationships, settlement analysis, bearing capacity, and stability analysis.
Course Component: Lecture

CVG 5178 Ice Mechanics (3 units)
Ice conditions in the Arctic; ice physics; classification of ice; mechanical properties of ice; mathematical modelling of creep and fracture behaviour of ice; offshore structures in arctic environments; ice forces acting on structures; ice induced vibrations; iceberg impact loads; physical modelling of ice-structure interaction; ice as a construction material; case histories. This course is equivalent to CIVJ 5108 at Carleton University.
Course Component: Lecture

CVG 5180 Biological Nutrient Removal (3 units)
Advanced theoretical, biological, and practical aspects of biological nutrient removal (BNR) (nitrification, denitrification and excess biological phosphorus) processes. Principles to be applied to the design and application of conventional and advanced BNR processes used for treatment of municipal and industrial wastewaters. Topics are as follows: microbiology and biochemistry fundamentals of BNR, nitrification process design of suspended growth and fixed film growth systems, denitrification process design of suspended growth and fixed film growth systems, excess biological phosphorus removal design including prefermentation. Design of 2, 3, 4 and 5 stage BNR systems. General activated sludge model and Simworks for BNR systems. Retrofit of exiting plants and pilot plant testing for BNR. This course is equivalent to ENVJ 5909 at Carleton University.
Course Component: Lecture

CVG 5181 Decentralized Wastewater Management (3 units)
Fundamental principles and practical design applications of decentralized wastewater treatment for domestic and industrial sources. Management of decentralized wastewater systems; Pre-treatment systems; Soil infiltration systems; Advanced onsite technologies, constructed wetlands; Alternative collection systems; Wastewater reuse and septic tank management.
Course Component: Lecture

CVG 5182 Water Resources Management (3 units)
Global water supply and demand; Integrated water resources management; Modeling and optimization of water resources systems; Reservoir Management; Uncertainty modeling; Climate Change and water; Decision under uncertainty.
Course Component: Lecture

CVG 5183 Mixing and Transport of Pollutants in Water Bodies (3 units)
Typical models for selected water resources systems: Rivers, lakes, estuaries; Water quality parameters; Conservative parameters; Non-conservative parameters; Laminar and turbulent flows; Dispersion; Pollution sources; Modeling; Simplified (integral) models; Dilution models; Three Dimensional models; Advection-Diffusion Equation; Analytical solution; Numerical solution; Non-conservative transport and Multi-component systems; Modeling approaches based on conservative and non-conservative transport and kinetics; Certain water quality parameters (Temperature, Salinity, etc.).
Course Component: Lecture

CVG 5184 Construction Cost Estimating (3 units)
General overview of construction cost estimating. Techniques and construction cost estimating process; Elements of project cost; Conceptual and detailed cost estimation methods; Risk assessment and range estimating; Work breakdown structure applied in building projects. Computer applications in building construction cost estimating and infrastructure projects.
Course Component: Lecture

CVG 5185 Construction Life Cycle Analysis (3 units)
General overview of analyzing the economics of construction projects by applying the concept of time value of money. Financing strategies for construction projects and profitability analysis; Correlation between Value Engineering, Life cycle cost analysis and assessment for construction projects. Break Even, Sensitivity and Risk analysis and their application to project life cycle analysis.
Course Component: Lecture

CVG 5186 Project Information Management (3 units)
Topics in contractual relationships between construction project teams. Different type of construction contracts and their application. Preparation of project documents. Evaluation of different types of project organization structure and associated project delivery systems. Bidding strategies. Network analysis using deterministic and stochastic methods for construction time and cost management.
Course Component: Lecture

CVG 5187 Rock Mechanics (3 units)
Rock exploration, laboratory and in-situ testing; rock mass classification; deformation and strength; failure criteria; stresses in rock; foundations on rock.
Course Component: Lecture
CVG 5188 Loads on Structures (3 units)
Overview of loads on buildings according to Canadian codes and standards. Dead and live loads; Snow loads; Wind loads; Earthquake loads; Loads on non-structural components; Vibrations. Selected topics in the practical design of building structures.
Course Component: Lecture

CVG 5189 Blast Engineering (3 units)
Overview of explosives and blast loads on structural and non-structural infrastructure components; dynamic analysis of elements under blast-induced shock waves and dynamic pressures; elastic and inelastic response; incremental equation of motion and nonlinear analysis; development of resistance functions; pressure-impulse (P-I) diagrams; design of blast-resistant buildings and building components, including glazed windows, curtain walls, and blast-resistant doors as per codes and standards; progressive collapse analysis; blast retrofits and blast-risk mitigation strategies.
Course Component: Lecture

CVG 5190 Rehabilitation of Concrete Structures (3 units)
Durability of concrete bridges and building structures in Canada; assessment and evaluation of damaged concrete structures; repair, rehabilitation, and strengthening techniques; applicable design codes and guidelines; monitoring technologies for structures; implications for infrastructure management.
Course Component: Lecture

CVG 5191 Diagnosis and Prognosis of Concrete Infrastructure (3 units)
Condition assessment of concrete infrastructure using experimental (i.e., visual, non-destructive, microscopic and mechanical) and analytical approaches; Overview of repair and maintenance techniques according to damage type and extent; “Serviceability performance” and “appraisal guides” for aging infrastructure; Design for durability through performance based design (PBD) approaches.
Course Component: Lecture

CVG 5192 Characterization Methods for Materials (3 units)
Modern materials characterization techniques especially with respect to civil engineering materials. Choosing the right characterization methods in order to determine the properties of materials such as chemical composition, atomic structure, and surface properties used in their research. Interpreting the results of each method as well as the insight into the interrelationships between characterization methods and their interdependency.
Course Component: Lecture

CVG 5193 Instrumentation and Experimental Design for Civil Engineering (3 units)
Introduction to instrumentation in civil engineering applications; Instrument types and performance; Strain gauges; Transducers; Measurement of position, velocity, acceleration, force, pressure, temperature and flow; Data collection and data acquisition systems; Diagnostics and calibration; Control (Closed versus Open-loop); Servomotor types and servo-valves.
Course Component: Lecture

CVG 5212 Climate Change Impacts on Water Resources (3 units)
Spatiotemporal distribution of water and its impact on human activities, including domestic and municipal consumption, hydropower generation, rain-fed and irrigated agriculture, design and operation of sewer systems, floodplain zoning, navigation, etc. Critical assessment of methodologies for climate change impacts estimation. Theoretical knowledge and hands-on applications experience needed to perform climate change analysis on a water resources system.
Course Component: Lecture

CVG 5214 Sustainable and Resilient Infrastructure (3 units)
Concepts of sustainability and resiliency as applied to civil engineering infrastructure. Discussion of evolving infrastructure needs and infrastructure risk profiles due to climate and societal change. Introduction to sustainability and resiliency assessment tools including non-stationary risk assessment, triple bottom line accounting, life cycle costs, and carbon accounting. Development of infrastructure design strategies to meet objectives for both sustainability and resiliency.
Course Component: Lecture

CVG 5216 Sustainable and Resilient Infrastructure in Changing Climate (3 units)
Development of a class of infrastructure with long-term sustainability and resiliency under various extreme events, particularly, the events introduced by changing climate. Climate change drivers, climate modelling and climate change impact studies. The concepts of sustainability, resiliency, and reliability. Climatic and flooding hazards. Uncertainty and non-stationarity processes as extreme events become more severe. Benefits of building sustainable and resilient infrastructures in terms of efficient capital and operational costs while providing society with healthier and more convenient infrastructure.
Course Component: Lecture

CVG 5232 Unit Operations of Water Treatment Lab (1.5 unit)
Bench-scale and pilot-scale experiments required to: a) assess the suitability of different physicochemical processes for particular applications, and b) design a full-scale facility. Conventional analytical techniques used in water treatment (pH, alkalinity, hardness, turbidity, color, spectrophotometric analysis). Process analysis techniques for process evaluation and scale-up including: zone sedimentation, batch flux settling tests, coagulation with iron and aluminum salts, flocculent sedimentation, filtration and fluidization, flotation. This course is equivalent to ENVJ 5911 at Carleton University.
Course Component: Lecture
CVG 5132 is corequisite to CVG 5232.

CVG 5238 Advanced Water Treatment Process Lab (1.5 unit)
Bench-scale and pilot-scale experiments required to: a) assess the suitability of different physicochemical processes for the removal of toxic and non-standard contaminants, and b) design a full-scale facility. Tracer tests and non-ideal reactor behaviour, activated carbon adsorption equilibria and kinetics, aeration. Total organic carbon analysis, spectrophotometry. Process analysis, techniques for process evaluation and scale-up including: aeration, analysis of non-ideal flow conditions. Tracer study of three basins, adsorption isotherm tests, activated carbon mini-column tests, oxidation kinetic tests. This course is equivalent to ENVJ 5912 at Carleton University.
Course Component: Lecture
CVG 5138 is corequisite to CVG 5238.

CVG 5301 Soil and Water Conservation Engineering (3 units)
The design, water quality and climate change impacts of soil and water conservation systems. Topics include: urban storm water management (including LID) erosion control practices, subsurface and surface drainage systems and irrigation technologies.
Course Component: Lecture
CVG 5311 Bridge Design (3 units)
Design of highway bridges according to the Canadian Highway Bridge Design Code (CHBDC). Comparisons with other bridge codes (e.g., the American Code - AASHTO, the European, the New Zealand, and the British bridge codes). The topics covered include the following: main structural components of highway bridges; types of highway bridges; serviceability and ultimate limit state design requirements; design loads (dead loads, traffic loads, seismic loads, and wind loads); load combinations; code specifications for loading due to traffic (design lane, characteristics of design truck, positions of design truck on bridge, etc.); dynamic effects due to traffic loads; practical approaches specified in CHBDC for determining forces and deflections in structural members; principles of capacity design in highway bridges. This course is equivalent to CIVJ 5310 at Carleton University.

Course Component: Lecture

CVG 5312 Durability of Concrete Structures (3 units)
1) Properties of cementitious materials (constituents of concrete; hydration of cement; structure of hardened concrete; transport processes in concrete); 2) deterioration of concrete (built-in problems; construction defects; cracking; dimensional stability; alkali-aggregate reaction; sulphate attack; corrosion of reinforcing steel; freezing-thawing cycles); (iii) evaluation of concrete structures (inspection; in-situ testing; laboratory testing); (iv) repair and maintenance of concrete (repair materials; repair procedures and techniques; prevention, protection and maintenance); and, (v) durability design (philosophy; modelling of deterioration processes; service life prediction; life-cycle cost analysis.) This course is equivalent to CIVJ 5311 at Carleton University.

Course Component: Lecture

CVG 5313 Seismic Analysis and Design of Concrete Structures (3 units)
Review of seismic hazards in Canada, building code provisions for earthquake loads, uniform hazard spectra, linear elastic modal response spectrum analysis, linear elastic time history analysis, equivalent static force procedure, advanced state-of-the-art nonlinear modeling techniques including the finite element method and fiber modeling, emerging methods such as performance-based earthquake engineering and displacement-based design, ductility concepts, plastic hinge formulations, capacity design philosophy for seismic resistance, seismic analysis and design of common seismic force resisting systems including slender and squat shear walls, moment resisting frames, coupled shear walls, and coupling beams, shear wall moment resisting frame interaction, and lessons learned from recent earthquakes. This course is equivalent to CIVJ 5312 at Carleton University.

Course Component: Lecture

CVG 5314 Geotechnical Hazards (3 units)
Understanding of assessment, prevention, and mitigation of geotechnical hazards, overview of natural and man-made geo-hazards; concepts of hazards, disasters, vulnerability and risks; geotechnical hazards induced by problem soils: fundamentals, assessment, and mitigation; landslide hazards and risk assessment: fundamentals, solutions (prevention, stabilization) for landslides and slope instability; monitoring of landslides and slope; mining geotechnical hazards: hazards related to surface mining geotechnical facilities; hazards related to underground mining geotechnical facilities. This course is equivalent to CIVJ 5313 at Carleton University.

Course Component: Lecture

CVG 5320 Fire Behaviour of Materials (3 units)
Fundamentals and scientific aspects of the behaviour of materials during fires and the fire hazards of materials. Topics to be covered include material specifications, thermal and mechanical properties, structural fire response, residual strength, failure criteria, mechanisms of flame retardancy, and standards and testing protocols. This course is equivalent to CIVE 5615 at Carleton University.

Course Component: Lecture

CVG 5321 Finite Elements in Field Problems (3 units)
Use of Galerkin and Ritz finite element formulation to solve one and two dimensional field problems, steady state and time-dependent phenomena involving potentials, heat transfer, fluid flow, diffusion, and dispersion with emphasis on practical applications. Courses EVG 7402 CVG 5321 cannot be combined for units. This course is equivalent to CIVE 5107 at Carleton University.

Course Component: Lecture

Prerequisite: Basic knowledge of third year-level undergraduate engineering mathematics. Courses EVG 7402, CVG 5321 cannot be combined for units.

CVG 5366 Master's Seminar in Civil Engineering
Attendance and participation in the monthly seminar. All students must make one presentation and continue to attend throughout the program. Graded S (Satisfactory) / NS (Not satisfactory).

Course Component: Seminar

CVG 6000 Projet en génie civil / Civil Engineering Report (6 crédits / 6 units)
Ce cours est équivalent à CIVE 5900 à la Carleton University. / This course is equivalent to CIVE 5900 at Carleton University.

Volet / Course Component: Recherche / Research

CVG 6108 Directed Studies I (3 units)
Special courses set up for one student on an exceptional basis. Limited to one in the Master's level and to two total Master's plus PhD. This course is equivalent to CIVE 5906 at Carleton University.

Course Component: Research

Permission of the Department is required.

CVG 6109 Directed Studies II (3 units)
Special courses set up for one student on an exceptional basis. Limited to one in the Master's level and to two total Master's plus PhD. This course is equivalent to CIVE 5907 at Carleton University.

Course Component: Research

Permission of the Department is required.

CVG 6301 Special Topics in Civil Engineering (3 units)
This course is equivalent to CIVJ 6001 at Carleton University.

Course Component: Lecture

CVG 6303 Special Topics in Civil Engineering (3 units)
This course is equivalent to CIVJ 6003 at Carleton University.

Course Component: Lecture

CVG 6304 Special Topics in Civil Engineering (3 units)
This course is equivalent to CIVJ 6004 at Carleton University.

Course Component: Lecture

CVG 6305 Special Topics in Civil Engineering (3 units)
This course is equivalent to CIVJ 6005 at Carleton University.

Course Component: Lecture

CVG 6306 Special Topics in Civil Engineering (3 units)
This course is equivalent to CIVJ 6006 at Carleton University.

Course Component: Lecture

Permission of the Department is required.
This page contains course descriptions for the Doctorate in Philosophy in Civil Engineering at Carleton University. Each course is equivalent to a corresponding course at Carleton University, as indicated by the course code and title. The course components are lecture-based, and the credits for each course are specified in parentheses. The list includes courses such as Special Topics in Civil Engineering, Advanced Soil Mechanics, and others. For a complete catalog, please visit the provided URL.
CVG 7129 Advanced Structural Design (3 units)
Course Component: Lecture

CVG 7130 Advanced Reinforced Concrete (3 units)
This course is equivalent to CIVE 5208 at Carleton University.
Course Component: Lecture

CVG 7131 Project Management (3 units)
This course is equivalent to CIVE 5600 at Carleton University.
Course Component: Lecture

CVG 7132 Computer-Aided Design of Building Structures (3 units)
Course Component: Lecture

CVG 7137 Dynamics of Structures (3 units)
This course is equivalent to CIVE 5106 at Carleton University.
Course Component: Lecture

CVG 7138 Engineered Masonry Behaviour and Design (3 units)
This course is equivalent to CIVE 5200 at Carleton University.
Course Component: Lecture

CVG 7139 Behaviour and Design of Steel Structures (3 units)
Course Component: Lecture

CVG 7140 Statistics, Probabilities and Decision-Making (3 units)
This course is equivalent to CIVE 5601 at Carleton University.
Course Component: Lecture

CVG 7141 Advanced Methods in Computer-Aided Design (3 units)
This course is equivalent to CIVE 5602 at Carleton University.
Course Component: Lecture

CVG 7142 Engineering Management (3 units)
Course Component: Lecture

CVG 7143 Design of Steel Bridges (3 units)
This course is equivalent to CIVE 5605 at Carleton University.
Course Component: Lecture

CVG 7144 Design of Concrete Bridges (3 units)
This course is equivalent to CIVE 5606 at Carleton University.
Course Component: Lecture

CVG 7145 Introduction to Bridge Design (3 units)
This course is equivalent to CIVE 5607 at Carleton University.
Course Component: Lecture

CVG 7150 Intercity Transportation, Planning and Management (3 units)
This course is equivalent to CIVE 5304 at Carleton University.
Course Component: Lecture

CVG 7151 Traffic Engineering (3 units)
This course is equivalent to CIVE 5305 at Carleton University.
Course Component: Lecture

CVG 7152 Highway Materials (3 units)
This course is equivalent to CIVE 5306 at Carleton University.
Course Component: Lecture

CVG 7153 Urban Transportation and Management (3 units)
This course is equivalent to CIVE 5307 at Carleton University.
Course Component: Lecture

CVG 7154 Geometric Design (3 units)
This course is equivalent to CIVE 5308 at Carleton University.
Course Component: Lecture

CVG 7155 Intercity Transportation Supply (3 units)
This course is equivalent to CIVE 5309 at Carleton University.
Course Component: Lecture

CVG 7156 Transportation Economics and Policy (3 units)
This course is equivalent to CIVE 5401 at Carleton University.
Course Component: Lecture

CVG 7158 Airport Planning (3 units)
This course is equivalent to CIVE 5403 at Carleton University.
Course Component: Lecture

CVG 7159 Transportation Terminal (3 units)
This course is equivalent to CIVE 5402 at Carleton University.
Course Component: Lecture

CVG 7160 Biofilm Processes in Waste-Water Treatment (3 units)
This course is equivalent to ENVE 5001 at Carleton University.
Course Component: Lecture

CVG 7163 Case Studies in Hydrogeology (3 units)
This course is equivalent to ENVE 5302 at Carleton University.
Course Component: Lecture

CVG 7164 Multiphase Flow and Contaminant Transport Modelling (3 units)
Course Component: Lecture

CVG 7169 Fundamentals of Fire Safety Engineering (3 units)
This course is equivalent to CIVE 5611 at Carleton University.
Course Component: Lecture

CVG 7170 Fundamentals of Fire Safety Engineering (3 units)
This course is equivalent to CIVE 5609 at Carleton University.
Course Component: Lecture

CVG 7171 Fire Dynamics I (3 units)
This course is equivalent to CIVE 5610 at Carleton University.
Course Component: Lecture

CVG 7172 Fire Dynamics II (3 units)
This course is equivalent to CIVE 5613 at Carleton University.
Course Component: Lecture

CVG 7173 People in Fires (3 units)
This course is equivalent to CIVE 5611 at Carleton University.
Course Component: Lecture

CVG 7174 Fire Modelling (3 units)
This course is equivalent to CIVE 5612 at Carleton University.
Course Component: Lecture

CVG 7175 Design for Fire Resistance (3 units)
This course is equivalent to CIVE 5614 at Carleton University.
Course Component: Lecture

CVG 7178 Nonlinear Analysis and Design of Advanced Earthquake-Resistant Structures (3 units)
Course Component: Lecture

CVG 7179 Introduction to Infrastructure Management (3 units)
Infrastructure management and its relationship to facility and asset management; challenges facing infrastructure managers; tools for effective IM; concept of total quality management; economic analysis of maintenance, rehabilitation and reconstruction; use of life cycle cost analysis in decision making, development and use of IM systems.
Course Component: Lecture
**CVG 7183 Seepage Through Soils (3 units)**
Course Component: Lecture

**CVG 7184 Blast Load Effects on Structures (3 units)**
Threats, risk analysis, vulnerability assessment; explosives: types and mechanisms; load determination; response of structural elements under blast loads, analysis and design for blast loads; blast mitigation, retrofit of structures; post-event assessment.
Course Component: Lecture

**CVG 7185 Topics in Fire Safety (3 units)**
Courses in special topics related to fire safety, not covered by other graduate courses.
Course Component: Lecture

**CVG 7300 Special Topics in Civil Engineering (3 units)**
This course is equivalent to CIVE 5705 at Carleton University.
Course Component: Lecture

**CVG 7318 Special Topics in Civil Engineering (3 units)**
Course Component: Lecture

**CVG 7319 Special Topics in Civil Engineering (3 units)**
Course Component: Lecture

**CVG 7320 Special Topics in Civil Engineering (3 units)**
Course Component: Lecture

**CVG 8366 Doctoral Seminar in Civil Engineering**
Attendance and participation in the monthly seminar. All students must make one presentation and continue to attend throughout the program. Graded S (Satisfactory) / NS (Not satisfactory).
Course Component: Seminar

**CVG 9998 Examen général de doctorat / Comprehensive Examination (Phd)**
Ce cours est équivalent à CIVE 6902 à la Carleton University. / This course is equivalent to CIVE 6902 at Carleton University.
Volet / Course Component: Recherche / Research
