**MASTER OF APPLIED SCIENCE CIVIL ENGINEERING SPECIALIZATION IN SCIENCE, SOCIETY AND POLICY**

**Summary**
- Degree offered: Master of Applied Science (MASc)
- Registration status options: Full-time; Part-time
- Language of instruction: English
- Primary program: MASc in Civil Engineering
- Collaborative specialization: Science, Society and Policy
- Program option (expected duration of the program): within two years of full-time study
- Academic units: Faculty of Engineering (http://engineering.uottawa.ca/), Department of Civil Engineering (http://engineering.uottawa.ca/civil/), Ottawa-Carleton Institute of Civil Engineering (http://www.ocice.ca/), Institute for Science, Society and Policy (http://issp.uottawa.ca/en/)

**Program Description**

**Ottawa-Carleton Joint Program**

Established in 1984, the Ottawa-Carleton Institute of Civil Engineering (OCICE) combines the research strengths and resources of the Departments of Civil and Environmental Engineering at Carleton University with that of the Department of Civil Engineering at the University of Ottawa.

The Institute offers graduate programs leading to the degrees of Master of Applied Science (MASc), Master of Engineering (MEng) and Doctor of Philosophy (PhD) in Civil Engineering.

The Institute is one of the participating units in the collaborative program in Science, Society and Policy (master’s level only).

Research facilities are shared between the two campuses. Students have access to the professors, courses and facilities at both universities, however, they must enroll at the "home university" of the thesis supervisor.

**Collaborative Program Description**

The collaborative program in Science, Society and Policy allows students enrolled in one of the participating master’s programs to specialize in science and innovation policy.

The objective of the collaborative program is to provide students with the knowledge and skills needed to evaluate the challenges confronting decision-making at the interface of science and policy. Students will have an opportunity to explore how evidence is used in decision-making, how current policies shape the scientific enterprise, and how emerging technologies interact with society.

The degree awarded specifies the primary program and indicates “Specialization in Science, Society and Policy.”

**Main Areas of Research**
- Construction engineering and management
- Environmental engineering
- Geotechnical engineering
- Structural engineering
- Sustainable Materials and Construction
- Water resources engineering

**Other Programs Offered Within the Same Discipline or in a Related Area**
- Master of Applied Science in Civil Engineering (MASc)
- Master of Applied Science in Environmental Engineering (MASc)
- Master of Applied Science in Environmental Engineering Specialization in Environmental Sustainability (MASc)
- Master of Engineering in Civil Engineering (MEng)
- Master of Engineering in Environmental Engineering (MEng)
- Doctorate in Philosophy in Civil Engineering (PhD)
- Doctorate in Philosophy in Environmental Engineering (PhD)

**Fees and Funding**
- Program fees

The estimated amount for university fees (https://www.uottawa.ca/university-fees/) associated with this program are available under the section Finance your studies (http://www.uottawa.ca/graduate-studies/programs-admission/finance-studies/).

International students enrolled in a French-language program of study may be eligible for a differential tuition fee exemption (https://www.uottawa.ca/university-fees/differential-tuition-fee-exemption/).

- To learn about possibilities for financing your graduate studies, consult the Awards and financial support (https://www.uottawa.ca/graduate-studies/students/awards/) section.

**Notes**
- Research activities can be conducted in either English or French or both depending on the language used by the professor and the members of the research group.
- The program is governed by the regulations and procedures for Joint Graduate Programs and the general regulations (http://www.uottawa.ca/graduate-studies/programs/ ) in effect for graduate studies at each of the two universities.
- In accordance with the University of Ottawa regulation, students have the right to complete their assignments, examinations, research papers, and theses in French or in English.

**Program Contact Information**

Graduate Studies Office, Faculty of Engineering (https://engineering.uottawa.ca/graduate-studies-office/)
STE 1024
800 King Edward Ave.
Ottawa ON Canada
K1N 6N5
Tel.: 613-562-5347

Applicants must be able to understand and fluently speak the language of instruction (French or English) in the program to which they are applying. Proof of linguistic proficiency may be required.

Note: Candidates are responsible for any fees associated with the language tests.

Documents Required for Admission

In addition to the documents required (http://www.uottawa.ca/graduate-studies/programs-admission/apply/required-documents/) for graduate and postdoctoral studies, candidates must submit the following documents:

- A resume
- A letter of intent

Letter outlining your professional goals and proposed research area.

- Two confidential letters of recommendation from professors who have known the applicant and are familiar with the student work.

It is highly recommended that you contact your referee prior to submitting your application to confirm their email address and their availability to complete your letter of recommendation.

- Transcripts from all universities attended:
  - Official transcripts from all universities attended must be submitted (mandatory).
  - This applies to all courses and programs at any university you attended, including regular programs (completed or not), exchanges, letters of permission, online or correspondence courses, courses taken as a special student or visiting student, etc.
  - If the transcript and degree certificate are not in English or French, a certified translation (signed and stamped/sealed) must be submitted.

- A collaborative program enrollment form (http://issp.uottawa.ca/en/education/SSPcollaborative/)

The collaborative enrollment form must be signed by the student’s thesis supervisor, as consent to participate in the collaborative program.

- 1-page cover letter (http://issp.uottawa.ca/en/education/SSPcollaborative/) (500 words maximum) outlining your interest in the collaborative program and how their research topic or area aligns
Program Requirements

Master’s with Collaborative Specialization

Requirements for this program have been modified. Please consult the 2019-2020 calendars (http://catalogue.uottawa.ca/en/archives/) for the previous requirements.

Students must meet the following requirements for the master’s with collaborative specialization:

Compulsory Courses (CVG):

15 course units in civil engineering (CVG) or environmental engineering (EVG) at the graduate level

Compulsory Course (ISP):

ISP 5101 Decision at the Interface of Science and Policy 3 Units

Seminar:

CVG 5366 Master’s Seminar in Civil Engineering

Thesis:

THM 7999 Master’s Thesis

Note(s)

1. Presentation and defence of a thesis on a research topic relating to science, society and policy, carried out under the supervision of a professor who is a member of the Civil Engineering program and/or of the collaborative program. The Science, Society and Policy Graduate Committee will determine whether or not the topic of the thesis is appropriate for the designation of “Specialization in Science, Society and Policy.” At least one of the thesis advisory committee members and thesis examiners must be recommended by the Science, Society and Policy Graduate Committee.

2. Students are responsible for ensuring they have met all of the thesis requirements (http://www.uottawa.ca/graduate-studies/students/theses/).

Minimum Requirements

The passing grade in all courses is B.

A student who has incurred two failures is withdrawn from the program.

Fast-Track from Master’s to PhD

Students enrolled in the master’s program in civil engineering at the University of Ottawa may be eligible to fast-track directly into the doctoral program without writing a master’s thesis. For additional information, please consult the “Admission Requirements” section of the PhD program.

Research

Research Fields & Facilities

Located in the heart of Canada’s capital, a few steps away from Parliament Hill, the University of Ottawa is among Canada’s top 10 research universities.

uOttawa focuses research strengths and efforts in four Strategic Areas of Development in Research (SADRs):

- Canada and the World
- Health
- e-Society
- Molecular and Environmental Sciences

With cutting-edge research, our graduate students, researchers and educators strongly influence national and international priorities.

Research at the Faculty of Engineering

Areas of research:

- Chemical and Biological Engineering
- Civil Engineering
- Electrical Engineering and Computer Science
- Mechanical Engineering

For more information, refer to the list of faculty members and their research fields on Uniweb.

IMPORTANT: Candidates and students looking for professors to supervise their thesis or research project can also consult the website of the faculty or department (https://www.uottawa.ca/graduate-studies/students/academic-unit-contact-information/) of their program of choice. Uniweb does not list all professors authorized to supervise research projects at the University of Ottawa.

Courses

Not all of the following courses are necessarily given each year.

CVG 5100 Deep Foundations (3 units)

Deep foundation types in North American practice (driven or bored piles, and slurry trench techniques); axial and lateral capacity and settlement analysis for single piles and pile groups; field inspection methods; pile dynamics; performance and analysis of static test loading. This course is equivalent to CIVJ 5000 at Carleton University.

Course Component: Lecture

CVG 5106 Site Improvements (3 units)

Description, design procedures and usage of current site improvement techniques, including preloading, earth reinforcement, dynamic consolidation, vibrocompaction, blasting densification, lime treatment, drains, and geotechnical fabrics. This course is equivalent to CIVJ 5006 at Carleton University.

Course Component: Lecture
CVG 5111 Hydraulic Structures (3 units)
Classification and function of hydraulic structures; analysis and design of hydraulic works for gravity dams, arch dams, earth fill and rock-fill dams; ancillary works including water intakes, various types of spillways, control structures, energy dissipation and stilling basin, bottom outlets. Advanced topic in channel design including transitions; hydraulic transients, free surface and free surge analysis; water towers and compensation basins; penstocks. Navigation locks. Coastal protection works and maritime structures. This course is equivalent to CIVJ 5501 at Carleton University.
Course Component: Lecture

CVG 5112 Computational Hydrodynamics (3 units)
Finite volume methods for advection, diffusion and shallow water equations using structured and unstructured grids, finite volume methods for incompressible Navier-Stokes equations (SIMPLE, SIMPLEC, PISO), error analysis: numerical diffusion and dispersion, truncation errors and Fourier analysis, introduction to turbulence modeling, introduction to methods for tracking free surfaces and moving beds, introduction to other methods in hydrodynamics: finite element, finite difference, Chebyshev and Fourier spectra, semi Lagrangian and vortex methods in hydrodynamics. This course is equivalent to CIVJ 5502 at Carleton University.
Course Component: Lecture

CVG 5120 Water Resources Systems (3 units)
Conservation of water resources. Multi-purpose project planning: study of domestic and foreign water development projects. Techniques for simulation, optimization, linear and dynamic programming. This course is equivalent to CIVJ 5506 at Carleton University.
Course Component: Lecture

CVG 5123 Advanced Topics in Hydrology (3 units)
Selected topics of current interest in surface and groundwater hydrology. This course is equivalent to CIVJ 5509 at Carleton University.
Course Component: Lecture

CVG 5124 Coastal Engineering (3 units)
Key concepts in coastal engineering: (1) wave mechanics and coastal hydrodynamics, (2) sediment transport and coastal morphodynamics and (3) coastal structures and coastal zone management. Wave mechanics and coastal hydrodynamics to include small-amplitude wave theory, finite amplitude wave theories (Stokes, Cnoidal and solitary wave), wave generation, wave transformations, development and prediction, hydrodynamics of coastal circulation. Sediment transport and coastal morphodynamics to include: wave and current-induced sediment transport, coastal sediment processes, longshore and cross-shore beach morphologic transformations, etc. Coastal structures and coastal zone management to include: beach erosion control, coastal structures (dikes, breakwaters, groins, seawalls), beach nourishment, coastal pollution and control, nearshore area development. This course is equivalent to CIVJ 5605 at Carleton University.
Course Component: Lecture

CVG 5125 Statistical Methods Hydrology (3 units)
Concepts of probability and random variables applied to hydrology. Statistical distributions, their approximation and analysis. Statistical inference, including tests of significance and estimation theory. Linear and multivariate correlation and regression techniques. Data generation and simulation techniques for design of water-resource systems. Introduction to hydrologic and meteorologic time series. This course is equivalent to CIVJ 5601 at Carleton University.
Course Component: Lecture

CVG 5142 Advanced Structural Dynamics (3 units)
Dynamic behaviour of civil engineering structures under excitations due to earthquakes, wind, waves, etc. Advanced methods in dynamic analysis of structures. Prediction of structural response. Design considerations. This course is equivalent to CIVJ 5201 at Carleton University.
Course Component: Lecture

CVG 5143 Advanced Structural Steel Design (3 units)
Analysis of thin-walled beams; design applications including members under combined forces; analysis and design of beams under non-uniform torsion; limit state design methodology; comparative study of modern structural steel standards; formulating elastic and plastic interaction relations for members under combined forces; designing columns, beams, and beam columns for cross-sectional strengths; local buckling and global stability considerations; design of bracing systems. This course is equivalent to CIVJ 5202 at Carleton University.
Course Component: Lecture

CVG 5144 Advanced Reinforced Concrete (3 units)
Study of the elastic and inelastic response of reinforced concrete structures under monotonic and cyclic loading. Methods for predicting structural behaviour of concrete elements. The relationship between recent research results and building codes. This course is equivalent to CIVJ 5300 at Carleton University.
Course Component: Lecture

CVG 5145 Theory of Elasticity (3 units)
Stress-strain relations. Theories of plane stress and plane strain. Use of stress functions, energy and variational methods in the analysis of elastostatic problems. This course is equivalent to CIVJ 5203 at Carleton University.
Course Component: Lecture

CVG 5146 Numerical Methods of Structural Analysis (3 units)
Numerical procedures and methods of successive approximations for the solution of structural problems. Virtual work, principles of minimum potential and complementary energy. Applications of variation and finite difference techniques to the solutions of complicated problems in beams, plates and shells. This course is equivalent to CIVJ 5302 at Carleton University.
Course Component: Lecture

CVG 5147 Theory of Plates and Shells (3 units)
Stress distribution in flat plates of various shapes. Large deflection theory, numerical methods: Membrane theory, bending theory for cylindrical shells, bending theory for shells of revolution. This course is equivalent to CIVJ 5204 at Carleton University.
Course Component: Lecture

CVG 5148 Prestressed Concrete Design (3 units)
Materials, methods of prestressing, prestress losses, and anchorage zone stresses. Elastic analysis, design and behaviour of simple and continuous prestressed concrete beams, frames and slabs. Discussion of current design specifications. Ultimate strength of members. This course is equivalent to CIVJ 5305 at Carleton University.
Course Component: Lecture

CVG 5149 Structural Stability (3 units)
Elastic, inelastic, and torsional buckling of columns, beam column behaviour, plane and space frame stability, lateral torsional buckling of beams, global buckling of truss systems, plate and shell buckling, local buckling in tubulars, use of energy methods, matrix analysis, and finite element analysis in modeling stability problems, bracing requirements, standard provisions and design considerations in structural stability. This course is equivalent to CIVJ 5304 at Carleton University.
Course Component: Lecture

CVG 5150 Advanced Concrete Technology (3 units)
Cement: types, hydration, physical properties; aggregate: classification, grading, properties; fresh concrete: influence of basis constituents and admixtures on workability, mixing, placing; strength of hardened concrete; nature of strength, influence of constituents, curing methods; durability; chemical attack, frost action, thermal effects; elasticity, shrinkage and creep; special concrete; lightweight, high density; mix design; approaches, weigh batching, volume proportioning, special mixes; field and laboratory test methods. This course is equivalent to CIVJ 5206 at Carleton University.
Course Component: Lecture

CVG 5151 Advanced Timber Design (3 units)
Characteristic values for timber and engineered wood products; modification factors used in design; design of members subjected to combined bending axial loading; design for bi-axial bending; design of curved glued laminated beams, Timber-Concrete Composite (TCC) floor systems; lateral design (wind and seismic loading) for light-frame, CLT and hybrid structures; advanced connection design including design of proprietary connections.
Course Component: Lecture

CVG 5153 Wind Engineering (3 units)
The structure and climate of wind; wind loading on structures; wind induced dynamic problems of structures; environmental aerodynamics; dispersion of pollutant; analysis of wind data; experimental investigations. This course is equivalent to CIVJ 5209 at Carleton University.
Course Component: Lecture

CVG 5154 Random Vibration (3 units)
Descriptions of random data. Frequency domain analysis and time domain analysis. Stochastic response of structures; wind and earthquake excitation, etc. Data analysis techniques. Prediction for design purposes. Simulation of random processes. Special topics. This course is equivalent to CIVJ 5308 at Carleton University.
Course Component: Lecture

CVG 5155 Earthquake Engineering (3 units)
Course Component: Lecture

CVG 5156 Finite Element Methods (3 units)
Review of basic matrix methods. Structural idealizations. The displacement versus the force method. Stiffness properties of structural elements. Finite elements in beam bending, plane stress and plate bending. This course is equivalent to CIVJ 5301 at Carleton University.
Course Component: Lecture

CVG 5157 Finite Element Methods (3 units)
Application of finite elements to folded plates, shells and continua. Convergence criteria and order of accuracy. Inertial and initial stress properties. Dynamic and buckling problems. Non-linear deflections and plasticity. This course is equivalent to CIVJ 5303 at Carleton University.
Course Component: Lecture

CVG 5158 Elements of Bridge Engineering (3 units)
Introduction; limit state design; highway bridge design loads; analysis and design of concrete decks; impact and dynamics; load capacity rating of existing bridges and construction in cold climate. This course is equivalent to CIVJ 5307 at Carleton University.
Course Component: Lecture

CVG 5159 Long Span Structures (3 units)
Course Component: Lecture

CVG 5160 Sediment Transport (3 units)
An introduction to particle transport, with special emphasis on river engineering applications, including natural channel design. Sediment properties, initiation of motion, bed load, suspended load, fluvial dunes, alluvial channels, bank erosion and protection, natural channel design. Special topics include contaminated sediments, local scour, morphodynamic modelling, fluvial habitat. This course is equivalent to CIVJ 5503 at Carleton University.
Course Component: Lecture

CVG 5161 Mechanics of Unsaturated Soils (3 units)
Introduction to unsaturated soils, phases of an unsaturated soil, phase properties and relations, stress state variables for saturated and unsaturated soils. Measurement of soil suction: theory of soil suction, capillarity, measurements of total suction and matric suction. Flow Laws: flow of water and measurement of permeability, shear strength theory: history, failure envelope for unsaturated soils, triaxial and direct shear tests, typical results, simple testing procedures, volume change behavior including expansive soils behavior. Soil-water characteristic curve: its behavior and use in predicting the engineering properties of unsaturated soils, practical applications of the principles of unsaturated soils. This course is equivalent to CIVJ 5106 at Carleton University.
Course Component: Lecture

CVG 5162 River Hydraulics (3 units)
Advanced concepts of river hydraulics, with an emphasis on field measurement techniques and application of numerical models. Navier-Stokes equations, turbulence, flow resistance, numerical modelling of simplified momentum and continuity equations, field-based measurement and statistical analysis of velocity fields. Special topics include contaminant transport, morphodynamic modelling. This course is equivalent to CIVJ 5504 at Carleton University.
Course Component: Lecture

CVG 5175 Numerical Methods for Geotechnical Engineers (3 units)
Non-linear analysis of stresses and deformations using the effective stress concept; analysis of consolidation using the excess pore water pressure concept; flow through porous media; finite element, discrete element and finite difference methods; applications to foundations of structures, retaining walls, dams, tunnels, pipelines, human-made and natural slopes in rock and soil. This course is equivalent to CIVJ 5105 at Carleton University.
Course Component: Lecture
CVG 5178 Ice Mechanics (3 units)
Ice conditions in the Arctic; ice physics; classification of ice; mechanical properties of ice; mathematical modelling of creep and fracture behaviour of ice; offshore structures in arctic environments; ice forces acting on structures; ice induced vibrations; iceberg impact loads; physical modelling of ice-structure interaction; ice as a construction material; case histories. This course is equivalent to CIVJ 5108 at Carleton University.
Course Component: Lecture

CVG 5180 Biological Nutrient Removal (3 units)
Advanced theoretical, biological, and practical aspects of biological nutrient removal (BNR) (nitrification, denitrification and excess biological phosphorus) processes. Principles to be applied to the design and application of conventional and advanced BNR processes used for treatment of municipal and industrial wastewaters. Topics are as follows: microbiology and biochemistry fundamentals of BNR, nitrification process design of suspended growth and fixed film growth systems, denitrification process design of suspended growth and fixed film growth systems, excess biological phosphorus removal design including prefermentation. Design of 2, 3, 4 and 5 stage BNR systems. General activated sludge model and Simworks for BNR systems. Retrofit of existing plants and pilot plant testing for BNR. This course is equivalent to ENVJ 5909 at Carleton University.
Course Component: Lecture

CVG 5181 Decentralized Wastewater Management (3 units)
Fundamental principles and practical design applications of decentralized wastewater treatment for domestic and industrial sources. Management of decentralized wastewater systems; Pre-treatment systems; Soil infiltration systems; Advanced onsite technologies, constructed wetlands; Alternative collection systems; Wastewater reuse and septage management.
Course Component: Lecture

CVG 5182 Water Resources Management (3 units)
Global water supply and demand; Integrated water resources management; Modeling and optimization of water resources systems; Reservoir Management; Uncertainty modeling; Climate Change and water; Decision under uncertainty.
Course Component: Lecture

CVG 5183 Mixing and Transport of Pollutants in Water Bodies (3 units)
Typical models for selected water resources systems: Rivers, lakes, estuaries; Water quality parameters; Conservative parameters; Non conservative parameters; Laminar and turbulent flows; Dispersion; Pollution sources; Modeling: Simplified (integral) models; Dilution models; Three Dimensional models; Advection-Diffusion Equation; Analytical solution; Numerical solution; Non-conservative transport and Multi-component systems; Modeling approaches based on conservative and non-conservative transport and kinetics; Certain water quality parameters (Temperature, Salinity, etc.).
Course Component: Lecture

CVG 5184 Construction Cost Estimating (3 units)
General overview of construction cost estimating. Techniques and construction cost estimating process; Elements of project cost; Conceptual and detailed cost estimation methods; Risk assessment and range estimating; Work breakdown structure applied in building projects. Computer applications in building construction cost estimating and infrastructure projects.
Course Component: Lecture

CVG 5185 Construction Life Cycle Analysis (3 units)
General overview of analyzing the economics of construction projects by applying the concept of time value of money. Financing strategies for construction projects and profitability analysis; Correlation between Value Engineering, Life cycle cost analysis and assessment for construction projects. Break Even, Sensitivity and Risk analysis and their application to project life cycle analysis.
Course Component: Lecture

CVG 5186 Project Information Management (3 units)
Topics in contractual relationships between construction project teams. Different type of construction contracts and their application. Preparation of project documents. Evaluation of different types of project organization structure and associated project delivery systems. Bidding strategies. Network analysis using deterministic and stochastic methods for construction time and cost management.
Course Component: Lecture

CVG 5187 Rock Mechanics (3 units)
Rock exploration, laboratory and in-situ testing; rock mass classification; deformation and strength; failure criteria; stresses in rock; foundations on rock.
Course Component: Lecture

CVG 5188 Loads on Structures (3 units)
Overview of loads on buildings according to Canadian codes and standards. Dead and live loads; Snow loads; Wind loads; Earthquake loads; Loads on non-structural components; Vibrations. Selected topics in the practical design of building structures.
Course Component: Lecture

CVG 5189 Blast Engineering (3 units)
Overview of explosives and blast loads on structural and non-structural infrastructure components; dynamic analysis of elements under blast-induced shock waves and dynamic pressures; elastic and inelastic response; incremental equation of motion and nonlinear analysis; development of resistance functions; pressure-impulse (P-I) diagrams; design of blast-resistant buildings and building components, including glazed windows, curtain walls, and blast-resistant doors as per codes and standards; progressive collapse analysis; blast retrofits and blast-risk mitigation strategies.
Course Component: Lecture

CVG 5190 Rehabilitation of Concrete Structures (3 units)
Durability of concrete bridges and building structures in Canada; assessment and evaluation of damaged concrete structures; repair, rehabilitation, and strengthening techniques; applicable design codes and guidelines; monitoring technologies for structures; implications for infrastructure management.
Course Component: Lecture

CVG 5191 Diagnosis and Prognosis of Concrete Infrastructure (3 units)
Condition assessment of concrete infrastructure using experimental (i.e. visual, non-destructive, microscopic and mechanical) and analytical approaches; Overview of repair and maintenance techniques according to damage type and extent; “Serviceability performance” and “appraisal guides” for aging infrastructure; Design for durability through performance based design (PBD) approaches.
Course Component: Lecture
CVG 5192 Characterization Methods for Materials (3 units)
Modern materials characterization techniques especially with respect to
civil engineering materials. Choosing the right characterization methods
in order to determine the properties of materials such as chemical
composition, atomic structure, and surface properties used in their
research. Interpreting the results of each method as well as the insight
into the interrelationships between characterization methods and their
interdependency.
Course Component: Lecture

CVG 5193 Instrumentation and Experimental Design for Civil Engineering
(3 units)
Introduction to instrumentation in civil engineering applications;
Instrument types and performance; Strain gauges; Transducers;
Measurement of position, velocity, acceleration, force, pressure,
temperature and flow; Data collection and data acquisition systems;
Diagonistics and calibration; Control (Closed versus Open-loop);
Servomotor types and servo-valves.
Course Component: Lecture

CVG 5212 Climate Change Impacts on Water Resources (3 units)
Spatiotemporal distribution of water and its impact on human activities,
including domestic and municipal consumption, hydropower generation,
rain-fed and irrigated agriculture, design and operation of sewer systems,
floodplain zoning, navigation, etc. Critical assessment of methodologies
for climate change impacts estimation. Theoretical knowledge and
hands-on applications experience needed to perform climate change
analysis on a water resources system.
Course Component: Lecture

CVG 5214 Sustainable and Resilient Infrastructure (3 units)
Concepts of sustainability and resiliency as applied to civil engineering
infrastructure. Discussion of evolving infrastructure needs and
infrastructure risk profiles due to climate and societal change.
Introduction to sustainability and resiliency assessment tools including
non-stationary risk assessment, triple bottom line accounting, life cycle
costs, and carbon accounting. Development of infrastructure design
strategies to meet objectives for both sustainability and resiliency.
Course Component: Lecture

CVG 5216 Sustainable and Resilient Infrastructure in Changing Climate (3
units)
Development of a class of infrastructure with long-term sustainability
and resiliency under various extreme events, particularly, the events
introduced by changing climate. Climate change drivers, climate
modelling and climate change impact studies. The concepts of
sustainability, resiliency, and reliability. Climatic and flooding hazards.
Uncertainty and non-stationarity processes as extreme events become
more severe. Benefits of building sustainable and resilient infrastructures
in terms of efficient capital and operational costs while providing society
with healthier and more convenient infrastructure.
Course Component: Lecture

CVG 5232 Unit Operations of Water Treatment Lab (1.5 unit)
Bench-scale and pilot-scale experiments required to: a) assess the
suitability of different physicochemical processes for particular
applications, and b) design a full-scale facility. Conventional analytical
techniques used in water treatment (pH, alkalinity, hardness, turbidity,
color, spectrophotometric analysis). Process analysis techniques for
process evaluation and scale-up including: zone sedimentation, batch
flux settling tests, coagulation with iron and aluminum salts, flocculent
sedimentation, filtration and fluidization, flotation. This course is
equivalent to ENVJ 5911 at Carleton University.
Course Component: Lecture
CVG 5132 is corequisite to CVG 5232.

CVG 5238 Advanced Water Treatment Process Lab (1.5 unit)
Bench-scale and pilot-scale experiments required to: a) assess the
suitability of different physicochemical processes for the removal
of toxic and non-standard contaminants, and b) design a full-scale
facility. Tracer tests and non-ideal reactor behaviour, activated carbon
adsorption equilibria and kinetics, aeration. Total organic carbon analysis,
spectrophotometry. Process analysis, techniques for process evaluation
and scale-up including: aeration, analysis of non-ideal flow conditions.
Tracer study of three basins, adsorption isotherm tests, activated carbon
mini-column tests, oxidation kinetic tests. This course is equivalent to
ENVJ 5912 at Carleton University.
Course Component: Lecture
CVG 5138 is corequisite to CVG 5238.

CVG 5301 Soil and Water Conservation Engineering (3 units)
The design, water quality and climate change impacts of soil and water
conservation systems. Topics include: urban storm water management
(including LID) erosion control practices, subsurface and surface
drainage systems and irrigation technologies.
Course Component: Lecture

CVG 5311 Bridge Design (3 units)
Design of highway bridges according to the Canadian Highway Bridge
Design Code (CHBDC). Comparisons with other bridge codes (e.g., the
American Code - AASHTO, the European, the New Zealand, and the British
bridge codes). The topics covered include the following: main structural
components of highway bridges; types of highway bridges; serviceability
and ultimate limit state design requirements; design loads (dead loads,
traffic loads, seismic loads, and wind loads); load combinations; code
specifications for loading due to traffic (design lane, characteristics
of design truck, positions of design truck on bridge, etc.); dynamic
effects due to traffic loads; practical approaches specified in CHBDC for
determining forces and deflections in structural members; principles
of capacity design in highway bridges. This course is equivalent to CIVJ
5310 at Carleton University.
Course Component: Lecture

CVG 5312 Durability of Concrete Structures (3 units)
i) Properties of cementitious materials (constituents of concrete;
hydration of cement; structure of hardened concrete; transport processes
in concrete); ii) deterioration of concrete (built-in problems; construction
defects; cracking; dimensional stability; alkali-aggregate reaction;
sulphate attack; corrosion of reinforcing steel; freezing-thawing cycles);
(iii) evaluation of concrete structures (inspection; in-situ testing;
laboratory testing); (iv) repair and maintenance of concrete (repair
materials; repair procedures and techniques; prevention, protection
and maintenance); and, (v) durability design (philosophy; modelling of
deterioration processes; service life prediction; life-cycle cost analysis.)
This course is equivalent to CIVJ 5311 at Carleton University.
Course Component: Lecture
CVG 5313 Seismic Analysis and Design of Concrete Structures (3 units)
Review of seismic hazards in Canada, building code provisions for earthquake loads, uniform hazard spectra, linear elastic modal response spectrum analysis, linear elastic time history analysis, equivalent static force procedure, advanced state-of-the-art nonlinear modeling techniques including the finite element method and fiber modeling, emerging methods such as performance-based earthquake engineering and displacement-based design, ductility concepts, plastic hinge formulations, capacity design philosophy for seismic resistance, seismic analysis and design of common seismic force resisting systems including slender and squat shear walls, moment resisting frames, coupled shear walls, and coupling beams, shear wall moment resisting frame interaction, and lessons learned from recent earthquakes. This course is equivalent to CIVJ 5312 at Carleton University.
Course Component: Lecture

CVG 5314 Geotechnical Hazards (3 units)
Understanding of assessment, prevention, and mitigation of geotechnical hazards, overview of natural and man-made geo-hazards; concepts of hazards, disasters, vulnerability and risks; geotechnical hazards induced by problem soils: fundamentals, assessment, and mitigation; landslide hazards and risk assessment: fundamentals, solutions (prevention, stabilization) for landslides and slope instability; monitoring of landslides and slope; mining geotechnical hazards: hazards related to surface mining geotechnical facilities; hazards related to underground mining geotechnical facilities.
Course Component: Lecture

CVG 5320 Fire Behaviour of Materials (3 units)
Fundamentals and scientific aspects of the behaviour of materials during fires and the fire hazards of materials. Topics to be covered include material specifications, thermal and mechanical properties, structural fire response, residual strength, failure criteria, mechanisms of flame retardancy, and standards and testing protocols. This course is equivalent to CIVE 5615 at Carleton University.
Course Component: Lecture

CVG 5321 Finite Elements in Field Problems (3 units)
Use of Galerkin and Ritz finite element formulation to solve one and two dimensional field problems, steady state and time-dependent phenomena involving potentials, heat transfer, fluid flow, diffusion, and dispersion with emphasis on practical applications. Courses EVG 7402 CVG 5321 cannot be combined for units. This course is equivalent to CIVE 5107 at Carleton University.
Course Component: Lecture
Prerequisite: Basic knowledge of third year-level undergraduate engineering mathematics. Courses EVG 7402, CVG 5321 cannot be combined for units.

CVG 5333 Research Methodology (3 units)
Key components and strategies required to build a robust scientific research program in civil engineering including research questions, literature review, experiment design, data interpretation, scientific manuscripts, public speaking, ethics, and plagiarism.
Course Component: Lecture

CVG 5366 Master's Seminar in Civil Engineering
Attendance and participation in the monthly seminar. All students must make one presentation and continue to attend throughout the program. Graded S (Satisfactory) / NS (Not satisfactory).
Course Component: Seminar

CVG 6000 Projet en génie civil / Civil Engineering Report (6 crédits / 6 units)
Ce cours est équivalent à CIVE 5900 à la Carleton University. / This course is equivalent to CIVE 5900 at Carleton University.
Volet / Course Component: Recherche / Research

CVG 6108 Directed Studies I (3 units)
Special courses set up for one student on an exceptional basis. Limited to one in the Master's level and to two total Master's plus PhD. This course is equivalent to CIVE 5906 at Carleton University.
Course Component: Research
Permission of the Department is required.

CVG 6109 Directed Studies II (3 units)
Special courses set up for one student on an exceptional basis. Limited to one in the Master's level and to two total Master's plus PhD. This course is equivalent to CIVE 5907 at Carleton University.
Course Component: Research
Permission of the Department is required.

CVG 6301 Special Topics in Civil Engineering (3 units)
This course is equivalent to CIVJ 6001 at Carleton University.
Course Component: Lecture

CVG 6303 Special Topics in Civil Engineering (3 units)
This course is equivalent to CIVJ 6003 at Carleton University.
Course Component: Lecture

CVG 6304 Special Topics in Civil Engineering (3 units)
This course is equivalent to CIVJ 6004 at Carleton University.
Course Component: Lecture

CVG 6305 Special Topics in Civil Engineering (3 units)
This course is equivalent to CIVJ 6005 at Carleton University.
Course Component: Lecture

CVG 6306 Special Topics in Civil Engineering (3 units)
This course is equivalent to CIVJ 6006 at Carleton University.
Course Component: Lecture

CVG 6307 Special Topics in Civil Engineering (3 units)
This course is equivalent to CIVJ 6007 at Carleton University.
Course Component: Lecture

CVG 6308 Special Topics in Civil Engineering (3 units)
This course is equivalent to CIVJ 6008 at Carleton University.
Course Component: Lecture

CVG 6309 Special Topics in Civil Engineering (3 units)
This course is equivalent to CIVJ 6009 at Carleton University.
Course Component: Lecture

CVG 6310 Special Topics in Civil Engineering (3 units)
This course is equivalent to CIVJ 6010 at Carleton University.
Course Component: Lecture

CVG 6311 Special Topics in Civil Engineering (3 units)
This course is equivalent to CIVJ 6011 at Carleton University.
Course Component: Lecture

CVG 6312 Special Topics in Civil Engineering (3 units)
This course is equivalent to CIVJ 6012 at Carleton University.
Course Component: Lecture

CVG 6313 Special Topics in Civil Engineering (3 units)
This course is equivalent to CIVJ 6013 at Carleton University.
Course Component: Lecture

CVG 6314 Special Topics in Civil Engineering (3 units)
This course is equivalent to CIVJ 6014 at Carleton University.
Course Component: Lecture
This course is equivalent to CIVE 5504 at Carleton University.
Course Component: Lecture
CVG 7108 Seepage and Water Flow Through Soils (3 units)
This course is equivalent to CIVE 5503 at Carleton University.
Course Component: Lecture
CVG 7107 Numerical Methods in Geomechanics (3 units)
This course is equivalent to CIVE 5502 at Carleton University.
Course Component: Lecture
CVG 7106 In Situ Meth in Geomechanics (3 units)
This course is equivalent to CIVE 5501 at Carleton University.
Course Component: Lecture
CVG 7105 Foundation Engineering (3 units)
This course is equivalent to CIVE 5500 at Carleton University.
Course Component: Lecture
CVG 7104 Earth Retaining Structures (3 units)
This course is equivalent to CIVE 5500 at Carleton University.
Course Component: Lecture
CVG 7103 Pavement and Materials (3 units)
This course is equivalent to CIVE 5303 at Carleton University.
Course Component: Lecture
CVG 7102 Advanced Soil Mechanics II (3 units)
Course Component: Lecture
CVG 7101 Advanced Soil Mechanics I (3 units)
This course is equivalent to CIVE 5300 at Carleton University.
Course Component: Lecture
CVG 7100 Case Studies in Geotechnical (3 units)
This course is equivalent to CIVE 5209 at Carleton University.
Course Component: Lecture
CVG 7109 Geotechnical Earthquake Engineering (3 units)
This course is equivalent to CIVE 5505 at Carleton University.
Course Component: Lecture
CVG 7108 Introductory Elasticity (3 units)
This course is equivalent to CIVE 5101 at Carleton University.
Course Component: Lecture
CVG 7107 Advanced Elasticity (3 units)
This course is equivalent to CIVE 5102 at Carleton University.
Course Component: Lecture
CVG 7106 Finite Element Methods Stress Analysis (3 units)
This course is equivalent to CIVE 5103 at Carleton University.
Course Component: Lecture
CVG 7105 Earth Retaining Structures (3 units)
This course is equivalent to CIVE 5104 at Carleton University.
Course Component: Lecture
CVG 7104 Advanced Elasticity (3 units)
This course is equivalent to CIVE 5105 at Carleton University.
Course Component: Lecture
CVG 7103 Pavement and Materials (3 units)
This course is equivalent to CIVE 5204 at Carleton University.
Course Component: Lecture
CVG 7102 Advanced Structural Design (3 units)
Course Component: Lecture
CVG 7101 Advanced Reinf. Concrete (3 units)
This course is equivalent to CIVE 5208 at Carleton University.
Course Component: Lecture
CVG 7100 Case Studies in Geotechnical (3 units)
This course is equivalent to CIVE 5209 at Carleton University.
Course Component: Lecture
CVG 7109 Geotechnical Earthquake Engineering (3 units)
This course is equivalent to CIVE 5505 at Carleton University.
Course Component: Lecture
CVG 7108 Introductory Elasticity (3 units)
This course is equivalent to CIVE 5101 at Carleton University.
Course Component: Lecture
CVG 7107 Advanced Elasticity (3 units)
This course is equivalent to CIVE 5102 at Carleton University.
Course Component: Lecture
CVG 7106 Finite Element Methods Stress Analysis (3 units)
This course is equivalent to CIVE 5103 at Carleton University.
Course Component: Lecture
CVG 7105 Earth Retaining Structures (3 units)
This course is equivalent to CIVE 5104 at Carleton University.
Course Component: Lecture
CVG 7104 Advanced Elasticity (3 units)
This course is equivalent to CIVE 5105 at Carleton University.
Course Component: Lecture
CVG 7103 Pavement and Materials (3 units)
This course is equivalent to CIVE 5204 at Carleton University.
Course Component: Lecture
CVG 7102 Advanced Structural Design (3 units)
Course Component: Lecture
CVG 7101 Advanced Reinf. Concrete (3 units)
This course is equivalent to CIVE 5208 at Carleton University.
Course Component: Lecture
CVG 7100 Case Studies in Geotechnical (3 units)
This course is equivalent to CIVE 5209 at Carleton University.
Course Component: Lecture
CVG 7109 Geotechnical Earthquake Engineering (3 units)
This course is equivalent to CIVE 5505 at Carleton University.
Course Component: Lecture
CVG 7108 Introductory Elasticity (3 units)
This course is equivalent to CIVE 5101 at Carleton University.
Course Component: Lecture
CVG 7107 Advanced Elasticity (3 units)
This course is equivalent to CIVE 5102 at Carleton University.
Course Component: Lecture
CVG 7106 Finite Element Methods Stress Analysis (3 units)
This course is equivalent to CIVE 5103 at Carleton University.
Course Component: Lecture
CVG 7105 Earth Retaining Structures (3 units)
This course is equivalent to CIVE 5104 at Carleton University.
Course Component: Lecture
CVG 7104 Advanced Elasticity (3 units)
This course is equivalent to CIVE 5105 at Carleton University.
Course Component: Lecture
CVG 7103 Pavement and Materials (3 units)
This course is equivalent to CIVE 5204 at Carleton University.
Course Component: Lecture
CVG 7102 Advanced Structural Design (3 units)
Course Component: Lecture
CVG 7101 Advanced Reinf. Concrete (3 units)
This course is equivalent to CIVE 5208 at Carleton University.
Course Component: Lecture
CVG 7100 Case Studies in Geotechnical (3 units)
This course is equivalent to CIVE 5209 at Carleton University.
Course Component: Lecture
CVG 7109 Geotechnical Earthquake Engineering (3 units)
This course is equivalent to CIVE 5505 at Carleton University.
Course Component: Lecture
CVG 7108 Introductory Elasticity (3 units)
This course is equivalent to CIVE 5101 at Carleton University.
Course Component: Lecture
CVG 7107 Advanced Elasticity (3 units)
This course is equivalent to CIVE 5102 at Carleton University.
Course Component: Lecture
CVG 7106 Finite Element Methods Stress Analysis (3 units)
This course is equivalent to CIVE 5103 at Carleton University.
Course Component: Lecture
CVG 7105 Earth Retaining Structures (3 units)
This course is equivalent to CIVE 5104 at Carleton University.
Course Component: Lecture
CVG 7104 Advanced Elasticity (3 units)
This course is equivalent to CIVE 5105 at Carleton University.
Course Component: Lecture
CVG 7103 Pavement and Materials (3 units)
This course is equivalent to CIVE 5204 at Carleton University.
Course Component: Lecture
CVG 7102 Advanced Structural Design (3 units)
Course Component: Lecture
CVG 7101 Advanced Reinf. Concrete (3 units)
This course is equivalent to CIVE 5208 at Carleton University.
Course Component: Lecture
CVG 7100 Case Studies in Geotechnical (3 units)
This course is equivalent to CIVE 5209 at Carleton University.
Course Component: Lecture
CVG 7109 Geotechnical Earthquake Engineering (3 units)
This course is equivalent to CIVE 5505 at Carleton University.
Course Component: Lecture
CVG 7108 Introductory Elasticity (3 units)
This course is equivalent to CIVE 5101 at Carleton University.
Course Component: Lecture
CVG 7107 Advanced Elasticity (3 units)
This course is equivalent to CIVE 5102 at Carleton University.
Course Component: Lecture
CVG 7106 Finite Element Methods Stress Analysis (3 units)
This course is equivalent to CIVE 5103 at Carleton University.
Course Component: Lecture
CVG 7105 Earth Retaining Structures (3 units)
This course is equivalent to CIVE 5104 at Carleton University.
Course Component: Lecture
CVG 7104 Advanced Elasticity (3 units)
This course is equivalent to CIVE 5105 at Carleton University.
Course Component: Lecture
CVG 7103 Pavement and Materials (3 units)
This course is equivalent to CIVE 5204 at Carleton University.
Course Component: Lecture
CVG 7102 Advanced Structural Design (3 units)
Course Component: Lecture
CVG 7101 Advanced Reinf. Concrete (3 units)
This course is equivalent to CIVE 5208 at Carleton University.
Course Component: Lecture
CVG 7100 Case Studies in Geotechnical (3 units)
This course is equivalent to CIVE 5209 at Carleton University.
Course Component: Lecture
CVG 7109 Geotechnical Earthquake Engineering (3 units)
This course is equivalent to CIVE 5505 at Carleton University.
Course Component: Lecture
CVG 7108 Introductory Elasticity (3 units)
This course is equivalent to CIVE 5101 at Carleton University.

CVG 8366 Doctoral Seminar in Civil Engineering
Attendance and participation in the monthly seminar. All students must make one presentation and continue to attend throughout the program. Graded S (Satisfactory) / NS (Not satisfactory).
Course Component: Seminar

CVG 9998 Examen général de doctorat / Comprehensive Examination (Phd)
Ce cours est équivalent à CIVE 6902 à la Carleton University. / This course is equivalent to CIVE 6902 at Carleton University.
Volet / Course Component: Recherche / Research

ISP 5101 Decision at the Interface of Science and Policy (3 units)
This course explores a number of critical issues in the design and implementation of science (or, more generally, evidence)-based policy. Topics will include: the nature of scientific evidence; who has standing in the provisioning of scientific evidence; the science and non-science of risk assessment; ethical dimensions of policy design and implementation; the role of science in policy design and implementation; the policy making process; and science policy performance evaluation.
Course Component: Lecture

ISP 5102 Science and Technology Governance and Communication (3 units)
This course explores a number of critical issues in the governance of science and technology (S&T) in democratic societies, with particular emphasis on the Canadian context. Topics will include the following: the history of S&T governance and communication in both Canada and abroad; an overview of the Canadian S&T policy and regulatory landscape; the role of government, the private sector and civil society in S&T governance; policy and regulatory experiments in fostering innovation (and the success thereof); the evolution of public S&T communication strategies and governance of emerging technologies.
Course Component: Lecture

ISP 5103 Capstone Seminar in Science, Society and Policy (3 units)
Involves partnering with organization(s) working on an issue relating to science, society and policy. In consultation with a member of the organization, students analyze the issue and complete a written report, either singly or in interdisciplinary teams, under the direction of the seminar professor who is responsible for evaluating the report.
Course Component: Lecture

ISP 5501 Prise de décision à l’interface de la science et des politiques (3 crédits)
Ce cours approfondit un certain nombre d’enjeux critiques liés à la conception et à la mise en œuvre de politiques scientifiques (ou, de façon plus générale, fondées sur des preuves). Les sujets abordés incluent les suivants : la nature de la preuve scientifique; qui a qualité pour fournir des preuves scientifiques; le côté scientifique et le côté non scientifique de l’évaluation des risques; les dimensions éthiques de la conception et de la mise en œuvre des politiques publiques; le rôle de la science dans la conception et la mise en œuvre des politiques publiques; le processus d’élaboration des politiques publiques; et l’évaluation du rendement des politiques publiques en matière de sciences.
Volet : Cours magistral

ISP 5502 Gouvernance et communication en science et technologie (3 crédits)
Ce cours approfondit un certain nombre d’enjeux critiques liés à la gouvernance des sciences et de la technologie (S et T) dans les sociétés démocratiques et, en particulier, dans le contexte canadien. Les sujets abordés incluent les suivants : l’histoire de la gouvernance et de la communication en sciences et technologie au Canada et à l’étranger; un aperçu du paysage réglementaire et politique canadien ayant trait aux sciences et à la technologie; le rôle du gouvernement, du secteur privé et de la société civile dans la gouvernance des sciences et de la technologie; les expériences relatives aux politiques et à la réglementation menées en vue de favoriser l’innovation (et leur réussite); l’évolution des stratégies de communication publique concernant les sciences et la technologie et la gouvernance des nouvelles technologies.
Volet : Cours magistral

ISP 5503 Séminaire d’intégration en science, société et politique publique (3 crédits)
Involves partnering with organization(s) working on an issue relating to science, society and policy. In consultation with a member of the organization, students analyze the issue and complete a written report, either singly or in interdisciplinary teams, under the direction of the seminar professor who is responsible for evaluating the report.
Volet : Cours magistral
