MASTER OF SCIENCE
NUTRITION AND FOOD BIOSCIENCES

Overview
Coming soon

Conditional upon approval by the Ministry of Training, Colleges and Universities.

Anticipated date for this program to receive its first cohort is September 1, 2022.

Summary
• Degree offered: Master of Science (MSc)
• Registration status option: Full-time
• Language of instruction: English
• Program option (expected duration of the program):
  with thesis (6 full-time terms; 24 consecutive months)
  • Academic units: Faculty of Health Sciences (https://health.uottawa.ca/), School of Nutrition Sciences

Program Description
The Master of Science Nutrition and Food Biosciences focuses on developing advanced research competencies to address current challenges in the areas of Nutrition and Food Biosciences in Canada and globally. The scope of this fundamental and applied sciences program covers the continuum from food processing to health and wellness. This interdisciplinary program offers advanced education in three main areas of expertise (clinical and public health nutrition, food sciences and cellular and molecular nutrition), which allow students to investigate the role of nutrition and food in promoting health and preventing and treating nutrition related illness. Students will gain a comprehensive understanding of the chemical composition and physical characteristics of foods, which determine their nutritive value and sensory properties. They will study the cellular and molecular mechanisms underlying the metabolic responses to different foods and diets and be able to communicate the importance of good nutrition for maintaining health and managing diet-related diseases. This program addresses the continuum of research from food formulation to metabolism, focusing on the intersection between healthy food and healthier lives.

Main Areas of Research
Members of the School of Nutrition Sciences are involved in three main research fields:
• Clinical and Public Health Nutrition,
• Food Sciences,
• Cellular and Molecular Nutrition.

Fees and Funding
• Program fees:
  The estimated amount for university fees (https://www.uottawa.ca/university-fees/) associated with this program are available under the section Finance your studies (http://www.uottawa.ca/graduate-studies/programs-admission/finance-studies/).

International students enrolled in a French-language program of study may be eligible for a differential tuition fee exemption (https://www.uottawa.ca/university-fees/differential-tuition-fee-exemption/).

• To learn about possibilities for financing your graduate studies, consult the Awards and financial support (https://www.uottawa.ca/graduate-studies/students/awards/) section.

Notes
• Programs are governed by the general regulations (http://www.uottawa.ca/graduate-studies/students/general-regulations/) in effect for graduate studies.
• In accordance with the University of Ottawa regulation, students have the right to complete their assignments, examinations, research papers, and theses in French or in English.

Admission Requirements
For the most accurate and up to date information on application deadlines, language tests and other admission requirements, please visit the specific requirements (https://www.uottawa.ca/graduate-studies/programs-admission/apply/specific-requirements/) webpage.

To be eligible, candidate must:
• Hold a bachelor's degree (or equivalent) in food science, nutrition science, health sciences, biology, biochemistry, microbiology, biomedical science or related disciplines with a minimum average of 70% (B) calculated according to the graduate studies guidelines.

Note: International candidates must check the admission equivalencies (https://www.uottawa.ca/graduate-studies/int-equivalencies/) for the diploma they received in their country of origin.

• Demonstrate high academic achievement as shown by official academic transcript, academic reference forms, and other supporting documentation.
• Receive written confirmation from at least one professor who is willing to supervise their research and thesis.

We recommend that candidates contact potential thesis supervisors as soon as possible.

• Provide a statement of interest and curriculum vitae.
• Arrange for two academic reference forms to be completed on your behalf.

Language Requirements
Applicants must be able to understand and fluently speak the language of instruction (English). They must be able to produce their written work or thesis in French or in English.

Applicants whose first language is not English must provide proof of proficiency in the language of instruction.

Note: Candidates are responsible for any fees associated with the language tests.

Notes
• The admission requirements listed above are minimum requirements and do not guarantee admission to the program.
• Admissions are governed by the general regulations (http://www.uottawa.ca/graduate-studies/students/general-regulations/) in effect for graduate studies.

Program Requirements
Master’s with Thesis
Students must meet the following requirements:

Compulsory courses

Thesis Proposal

NUT 6997 Research Proposal

Thesis

THM 7999 Master’s Thesis

Note(s)

1. The school may require students to take additional courses, depending on their backgrounds.
2. The list of specialized modules being offered in each field in any given year will be indicated on the program website. Students are allowed to take 3 optional course units in another discipline with approval of the Department and the graduate program director.
3. Presentation and defense of a thesis based on original research carried out under the direct supervision of a faculty member of the School.
4. Students are responsible for ensuring they have met all of the thesis requirements.

Minimum Requirements
The passing grade in all courses is C+.

Two failures in courses (either 1-unit module or 1.5 unit course) or the thesis proposal, or two unsatisfactory research progress reports will result in withdrawal from the program (See the Academic Regulation II-5.2 Unsatisfactory progress and withdrawal (https://www.uottawa.ca/administration-and-governance/academic-regulation-II-5-examinations-and-grading-for-graduate-studies.html)).

Research

Research Fields & Facilities
Located in the heart of Canada’s capital, a few steps away from Parliament Hill, the University of Ottawa is among Canada’s top 10 research universities.

uOttawa focuses research strengths and efforts in four Strategic Areas of Development in Research (SADRs):

• Canada and the World
• Health
• e-Society
• Molecular and Environmental Sciences

With cutting-edge research, our graduate students, researchers and educators strongly influence national and international priorities.

Research at the Faculty of Health Sciences

Research at the Faculty involves many important aspects of health, including women’s health, health in the elderly, health needs of francophones in a minority context, Aboriginal health, physical activity and health, multiple interventions in population health, palliative care, rehabilitation and functional autonomy, health and technology, and evidence based practice.

Facilities, Research Centres and Institutes at the Faculty of Health Sciences

- The Ottawa Hospital Research Institute
- The Children’s Hospital of Eastern Ontario Research Institute
- The Bruyère Research Institute
- The Community Health Research Unit
- The Institute for Rehabilitation Research and Development
- The University of Ottawa Institute of Mental Health Research
- L’Institut de recherche de l’Hôpital Montfort
- The Institute of Population Health
- University of Ottawa Heart Institute

For more information, refer to the list of faculty members and their research fields on Uniweb.

IMPORTANT: Candidates and students looking for professors to supervise their thesis or research project can also consult the website of the faculty or department (https://www.uottawa.ca/graduate-studies/students/academic-unit-contact-information/) of their program of choice. Uniweb does not list all professors authorized to supervise research projects at the University of Ottawa.

Courses

**NUT 5101 Research and Communications in Nutrition and Food Biosciences (1.5 unit)**

Building skills in critical evaluation of the scientific literature in nutrition and food biosciences. Demonstrating effective communication of scientific information. Preparation and delivery of one oral presentation and one poster. Online modules introduce concepts for identifying and defining research questions, experimental design, qualitative and quantitative research methods, statistics models and data interpretation.

**Course Component:** Seminar

**NUT 5102 Knowledge Translation and Transfer for Nutrition and Food Biosciences (1.5 unit)**

Lectures, tutorials and group discussions designed to provide advanced training in translation and transfer of scientific knowledge appropriate for different audiences. Preparation and presentation of communication tools for communicating food and nutrition information to the public. Introduction to basic professional skills related to academic integrity, scientific writing, as well as professional conduct and etiquette.

**Course Component:** Seminar

**NUT 5111 Epidemiological Surveillance of Diet and Nutritional Status (1 unit)**

Examination of individual and population-based nutrition surveillance data. Factors affecting the development of food policies and public health goals globally taking into consideration the context of diverse populations. Methods of data collection and analysis used for nutritional assessment.

**Course Component:** Lecture

**NUT 5112 Social Nutrition and Vulnerable Populations (1 unit)**

A multidisciplinary approach to study nutritional status of vulnerable groups. Strategies and policies to improve food security, food procurement and diet quality.

**Course Component:** Lecture

**NUT 5113 Advances in Clinical Nutrition (1 unit)**

Approaches to nutritional assessment and care strategies for nutritional support for healthy individuals, as well as those with acute and chronic diseases and conditions. Methods used to assess nutritional status and metabolic disturbances associated with disease development.

**Course Component:** Lecture

**NUT 5114 Impact of Nutrition in Health and Disease (1 unit)**

Role of food and nutrition in determining health and wellness at the individual and population levels. Strategies for preventing and managing diet related diseases.

**Course Component:** Lecture

**NUT 5115 Indigenous Nutrition and Food Culture (1 unit)**

Overview of traditional and current dietary patterns among Indigenous Canadians. Impact of settlers’ interventions on traditional food sources, food culture and food security. Implications of the increasing prevalence of a Western diet on the health of Indigenous communities.

**Course Component:** Lecture

**NUT 5121 Food Composition (1 unit)**

Molecular, supramolecular and bulk properties of macronutrients and their influence on structural complexity on their functional roles in food products. Structure, properties, stability and nutritional value of micronutrients and bioactive components. Methods of data analysis.

**Course Component:** Lecture

**NUT 5122 Dependence of Food Properties on Structural Organization of Biomaterials (1 unit)**

**Course Component:** Lecture

**NUT 5123 Bioaccessibility of Bioactive Components (1 unit)**

Occurrence, types, chemical structures and processing of bioactive components in foods. Food matrix effect on accessibility of bioactive components, and their applications in food production. Mechanistic basis of in vitro models and methods.

**Course Component:** Lecture

**NUT 5124 Bioavailability of Bioactive Components (1 unit)**

Influence of bioavailability of bioactive components of food and nutritional supplements on nutritional quality. Cell culture and in vivo models. Advantages and drawbacks of various models for studying nutritional and bioactive properties of food.

**Course Component:** Lecture
NUT 5131 Nutrition and Intestinal Health (1 unit)
Theory and methodological approaches to study physiological processes involved in maintaining gastrointestinal integrity and function. Modulation of the intestinal microenvironment, digestion, nutrient absorption, permeability, motility, and immune response by food-derived metabolites.
Course Component: Lecture

NUT 5132 Composition and Function of Microbiome (1 unit)
Course Component: Lecture

NUT 5133 Nutrition and Neuroscience (1 unit)
Bidirectional routes of communication between the gastrointestinal tract and the central nervous system with a specific focus on how the gut microbiota regulates the interactive pathways. Factors influencing the gut-brain axis, their effects on the body and the brain, and resulting impacts on physical and mental health.
Course Component: Lecture

NUT 5134 Food Function and Chronic Disease (1 unit)
Etiology, treatment strategies, and research approaches to study diet related diseases. Role of foods and food-derived metabolites in disease prevention and treatment by studying underlining molecular mechanisms at the cellular and metabolic levels.
Course Component: Lecture

NUT 5940 Étude dirigée en nutrition et biosciences alimentaires / Directed Study in Nutrition and Food Biosciences (1 crédit / 1 unit)
Étude indépendante sur un sujet pour répondre à une exigence académique particulière d’un étudiant. / Independent study on a topic to meet a particular educational requirement of a student.
Volet / Course Component: Recherche / Research
Permission de la direction adjointe aux études supérieures est requise. / Permission of the Director of Graduate Studies is required.
NUT 6997 Proposition de recherche / Research Proposal
Volet / Course Component: Recherche / Research
