HONOURS BSC IN BIOCHEMISTRY / BASC IN CHEMICAL ENGINEERING (BIOTECHNOLOGY) - BIOMEDICAL ENGINEERING OPTION

Biochemistry is the chemistry of life. It provides the foundation for understanding all biological processes as well as the molecular basis and treatment of human disease.

The biochemistry bachelor’s provides you with the education you need to play a leading role in new and exciting areas of medical research. You will be exposed to cutting-edge research and knowledge. Our program prepares you for graduate studies and for an academic or research career in the medical sciences. What’s more, biochemistry provides an excellent foundation for further studies in medicine and other areas of health care.

You can choose an Honours BSc in Biochemistry, a major or a minor.

If you want to pursue a career in experimental biochemistry, choose the Honours program. If you prefer a basic biochemistry education, choose a major. And if you want to focus on another discipline but are interested in biochemistry, choose a minor.

If you have a particular interest in microorganisms and the role that the immune system plays in health and disease, you can also choose an Honours BSc in biochemistry with an option in microbiology and immunology. We also offer an integrated biotechnology program that lets you combine studies in biochemistry and chemical engineering and receive both a BSc in biochemistry and a BASc in chemical engineering in five years.

As for the language of instruction, compulsory courses and many optional course units are available in either English or French.

If you choose the Honours in Biochemistry, you have the opportunity to complete a full-year research project under the supervision of a professor from the departments of Chemistry and Biomolecular Sciences, Biology, Physics, or Biochemistry, Microbiology and Immunology, or under the supervision of an affiliated principle investigator from one of the many research institutes in the National Capital Region. Given the breadth of research expertise within our program, you can conduct research in many areas of modern biomedicine, including biochemistry, microbiology, immunology, chemical biology, molecular biology, cell biology, proteomics, genomics, systems biology and bioinformatics.

This program is offered in English and in French.

Program Requirements

Co-operative education is available with this program.

The French Immersion Stream is available with this program.

Requirements for this program have been modified. Please consult the 2018-2019 calendars (http://catalogue.uottawa.ca/en/archives/) for the previous requirements.
### Option 1: Honours Project

**BCH 4040** Honours Research - Biochemistry

### Option 2: Honours Project Substitution

- 9 course units among the 3000 or 4000 level courses in biochemistry (BCH), biology (BIO), biopharmaceutical sciences (BPS), cellular and molecular medicine (CMM), chemistry (CHM), pharmacology (PHA), physiology (PHS), microbiology and immunology (MIC)

3 course units from: 3 Units
- **BPS 3101** Genomics
- **BCH 4101** Human Genome Structure and Function

6 course units from: 6 Units
- **BCH 4122** Structural Biology of Proteins
- **BCH 4125** Cellular Regulation and Control
- **BCH 4188** Nucleic Acids - Structure and Functions
- **BCH 4300** Selected Topics in Biochemistry
- **CHG 3111** Unit Operations
- **CHG 3112** Process Synthesis, Design and Economics
- **CHG 3122** Chemical Engineering Practice
- **CHG 3127** Chemical Reaction Engineering
- **CHG 3305** Advanced Materials in Chemical Engineering
- **CHG 3316** Transport Phenomena
- **CHG 3326** Principles of Phase Equilibria and Chemical Reaction Equilibria
- **CHG 3337** Data Collection and Interpretation

### Compulsory Fifth-Year Courses:

- **CHG 3335** Process Control
- **CHG 4116** Chemical Engineering Laboratory
- **CHG 4250** Plant Design Project
- 6 course units from: 6 Units
  - **CHG 4900** Thesis and seminars
  - or 6 course units of technical electives
- **CHG 4307** Process Risk Management and Sustainability
- **CHG 4343** Computer-Aided Design in Chemical Engineering
- **CHG 4381** Biochemical Engineering
- **GNG 4170** Engineering Law
- 3 course units of technical electives 3 Units

Total: 189 Units

### Note(s)

1. CHG 1125 must be taken in first or second year; first year is recommended.
2. It is recommended that GNG 1106 be taken in first or second year.
3. Complementary elective courses at the undergraduate level includes GNG 2101, GNG 4170, and GNG 4120, but excludes all courses offered by the Faculty of Science and the Faculty of Engineering as well as all courses that have a science, mathematics or engineering content. For a complete list of courses please refer to the list of complementary elective courses (https://engineering.uottawa.ca/undergraduate-programs/courses/complementary-electives/) on the Faculty of Engineering website.
4. This course runs from September to April.
5. The research project is highly recommended for students who intend to pursue a career in research, but a CGPA of 7.0 is required to be eligible for the project. This course runs from September to April.
6. This course may not be available every year.
7. Consult the list of technical electives for the Biomedical Engineering option in the regular Chemical Engineering program.
