MAJOR IN PHYSICAL GEOGRAPHY AND GEOMATICS

Physical Geography is the scientific study of processes and patterns at the Earth's surface. It uses field and laboratory measurements and spatial data to evaluate our world's changing climates, water, land, plants and animals. Physical geographers are trained to synthesize environmental knowledge and apply it to real-world problems such as coastal erosion or loss of habitat. Solving these problems also requires the collection, management and computer analysis of the vast amounts of spatial data now available, which is the domain of Geomatics.

Students in the BSc Major in Physical Geography and Geomatics at the University of Ottawa learn to use the full range of geospatial technologies (drones/UAVs, global positioning systems, geographic information systems, satellite imaging, spatial analysis) to study environments ranging from the mountains of the Yukon to the coral reefs of Zanzibar. Graduates from the program will have the scientific knowledge and the technical skills to become leaders in these growing fields.

The program is offered in English and in French.

Program Requirements

The table below includes only the discipline-specific courses. Please refer to the Academic Regulations (http://web5.uottawa.ca/admingov/regulations.html) for information on the Honours bachelor's with double major and the Honours bachelor's with major and minor.

Co-operative education is available when taken as part of an honours degree.

The extended French stream is available with this program.

This program cannot be combined with the Minor in Geomatics.

This program partially satisfies the academic requirements of the Association of Professional Geoscientists of Ontario.

Compulsory courses at the 1000 level
GEG 1301 The Physical Environment 3 Units
ITI 1120 Introduction to Computing I 3 Units

Compulsory courses at the 2000 level
GEG 2301 Geomorphology 3 Units
GEG 2304 Climatology 3 Units
GEG 2320 Introduction to Geomatics 3 Units
GEG 2918 Field Camp I 3 Units

Compulsory courses at the 3000 level
GEG 3105 Remote Sensing 3 Units
GEG 3312 Advanced GIS 3 Units

Compulsory courses at the 4000 level
GEG 4301 Advanced Geomatics 3 Units

Optional courses
9 optional course units from: 9 Units
BIO 1130 Introduction to Organismal Biology
CHM 1311 Principles of Chemistry
GEO 1111 Introduction to Earth Systems
GEO 1115 Introduction to Earth Materials
PHY 1321 Principles of Physics I

6 optional course units from one of the following options: 6 Units

Option 1
MAT 1320 Calculus I
MAT 1322 Calculus II

Option 2
MAT 1330 Calculus for the Life Sciences I
MAT 1332 Calculus for the Life Sciences II

3 optional course units from: 1 3 Units
GEG 4000 Field Research
GEG 4001 Northern Field Research
GEG 4100 Glaciology
GEG 4921 Physical Geography Field Camp

15 optional course units from: 15 Units
GEG 3101 Advanced Geomorphology
GEG 3102 Hydrology
GEG 3114 Biogeography
GEG 3300 Selected Topics in Physical Geography
GEG 3306 Quaternary Paleogeography
GEG 3524 Histoire de la géographie
GEG 4000 Field Research
GEG 4001 Northern Field Research
GEG 4101 Permafrost Environments
GEG 4120 GIS and Numerical Spatial Analysis
GEG 4121 Applications of GIS in Natural and Social Sciences
GEG 4126 Seminar in Physical Geography
GEG 4129 Global Climate Change
GEG 4512 Paléoenvironnements du quaternaire

Total: 60 Units

1 GEG 4000 and GEG 4001 are 6 unit courses. The extra 3 units will count towards optional 3000 or 4000 level course units.
